# ABSTRACT BOOK

a cura della Società Geologica Italiana

Congresso congiunto  
SGI-SIMP

**CATANIA-2018**  
12-14 SETTEMBRE

CONGRESSO  
SGI · SIMP

«Geosciences for the environment,  
natural hazards and cultural heritage»

*PRESIDENTI DEL CONGRESSO:*

Carmelo Monaco (SGI) e Paolo Mazzoleni (SIMP).

*COMITATO SCIENTIFICO:*

Valerio Agnesi, Domenico Calcaterra, Angelo Camerlenghi, Piergiulio Cappelletti, Stefano Catalano, Massimo Coltorti, Claudio Faccenna, Sandro Conticelli, Agata Di Stefano, Elisabetta Erba, Stefano Gresta, Alessio Langella, Alessandro Pavese, Mauro Prencipe, Marco Viccaro.

*COMITATO ORGANIZZATORE*

Rosolino Cirrincione (coordinatore), Germana Barone, Stefano Branca, Giovanni Barreca, Bernardo Carmina, Salvatore Caffo, Carlo Cassaniti, Domenico Cosentino, Giorgio De Guidi, Lorenza Fascio, Eugenio Fazio, Carmelo Ferlito, Patrizia Fiannacca, Nadia Malaspina, Rosanna Maniscalco, Gaetano Ortolano, Giovanna Pappalardo, Fabio Massimo Petti, Rosalda Punturo, Rossana Sanfilippo, Giuseppe Tortorici, Alessandro Zuccari.

*CURATORI DEL VOLUME*

Fabio Massimo Petti, Bernardo Carmina, Rosolino Cirrincione, Carmelo Monaco.

*Papers, data, figures, maps and any other material published are covered by the copyright own by the **Società Geologica Italiana**.*

***DISCLAIMER: The Società Geologica Italiana, the Editors are not responsible for the ideas, opinions, and contents of the papers published; the authors of each paper are responsible for the ideas opinions and contents published.***

***La Società Geologica Italiana, i curatori scientifici non sono responsabili delle opinioni espresse e delle affermazioni pubblicate negli articoli: l'autore/i è/sono il/i sol/i responsabile/i.***

## PLATINUM SPONSORS

## GOLD SPONSORS

## SILVER SPONSORS

## BRONZE SPONSORS

## ABSTRACT INDEX

Plenary lectures	1
Session S1. Biota evolution, biomineralization and responses of ecosystems to environmental perturbations: from local to global, from short- to long-term.....	6
Session S2. Deciphering ancient paleoenvironmental perturbations and their impact on the marine ecosystems.....	22
Session S3. Marine geohazards on the continental margins of Italy .....	49
Session S4. The role of Italian scientists and educators in the International Ocean and Continental Drilling Programs: major achievements and new perspective.....	64
Session S5. Onshore and offshore Quaternary sedimentary processes and sequences in the Mediterranean regions .....	80
Session S6. The dynamics of sedimentary processes in coastal areas.....	92
Session S7. From analogue to digital geological mapping: opportunities and risks in the use of new tools .....	103
Session S8. Tectonic and sedimentation relationships in Mediterranean basins and belts. A tribute to Fabio Lentini.....	130
Session S9. Faulting and folding across the scales. How, where, and why the lithosphere deforms .....	161
Session S10. The role of shear zones in the tectono-metamorphic evolution of the lithosphere: insights from microfabric to mountain belt structures.....	181
Session S11. Tectono-metamorphic processes from micro-scale to plate margins: Geological, Geophysical and Petrological approaches in unravelling the evolution of metamorphic terrains in collisional belts.	210
Session S12. Georesources and Energy for the XXI Century.....	238
Session S13. Outcrop analogues in exploration and production.....	269
Session S14. Integrated studies of recent and active deformations onland and offshore .....	280
Session S15. Tectonic and geodynamic control on large earthquakes and complex earthquake sequences: case studies from Italy and not only.....	301
Session S16. Mediterranean subduction zones: from deep mantle to shallow structure and volcanism.....	325
Session S17. Geodynamic evolution between the Variscan and Alpine orogeneses: clues from mantle features and magmatic events .....	342
Session S18. The nature of the crust-mantle transition and its effects on the regional tectonic and magmatic evolution.....	355
Session S19. Melt/fluid-rock interaction and migration from the mantle to the surface.....	370
Session S20. Magma genesis and transport .....	405
Session S21. Linking deep and surface processes: advances in volcanology from a multidisciplinary perspective.....	435

Session S22. Volcano Hazard Monitoring .....	456
Session S23. Minerals at non-ambient conditions: A Snapshot of the Earth and other planetary bodies.....	467
Session S24. Geomaterials: Nature, properties and technology .....	490
Session S25. Puzzle crystallography of inorganic structures. A tribute to Fiorenzo Mazzi .....	509
Session S26. Zeolites and porous materials: Unravelling the relations between crystal-chemistry, stability, structure and properties .....	522
Session S27. Environmental and medical mineralogy: from molecular to macro scale processes .....	535
Session S28. Mineralogy, waste management and environmental pollution.....	549
Session S29. Environmental pollution related to Naturally Occurring Asbestos (NOA) in serpentinites and other geo-matrices .....	570
Session S30. Geosciences for Cultural Heritage.....	592
Session S31. Mining sites: from industrial heritage to cultural heritage .....	642
Session S32. Cave and karst studies: from ancient to modern processes .....	658
Session S33. The contribute of Hydrogeology and Geochemistry in the study and management of the water resources .....	679
Session S34. Monitoring of deformation of structures and ground surface displacements.....	708
Session S35. Landslides: monitoring, hazard and impact on society and cultural heritage .....	724
Session S36. Landscape and Landforms: geoheritage in urban and natural areas.....	738
Session S37. Geoparks and geosites: tools for knowledge and protection of geological heritage .....	756
Session S38. History of geosciences and Geoethics: the right way for social responsibility.....	774
Session S39. Fifty years after the Belice's Earthquake. Considerations on geological, geophysical, geochemical, territorial and social aspects of this earthquake and its heritage in the connections between the Italian society and seismic catastrophes.....	790
Session S40. The role of abiotic and biotic soil components, environmental materials and factors, and physical evidence in criminal investigations, environmental crimes, and legal system.....	805
Session S41. Planetary evolution: insights from geological studies, meteorite analyses and terrestrial analogues .....	820
Session S42. Geosciences at school 2018: geoscience and society .....	845
Authors' index.....	880

## The Predazzo Intrusive Complex (Dolomites, Southern Alps): thermobarometry, oxybarometry and hygrometry of a shallow multi-pulse intrusion

*Keywords:* Predazzo, Dolomites, Thermobarometry.

The Predazzo Intrusive Complex (PIC) is the most intriguing remnant of the Middle Triassic magmatic systems of the Dolomitic Area (Southern Alps domain). Almost entirely preserved by the Alpine tectonics, this complex is an ideal laboratory for investigating the physico-chemical conditions of magma intrusion in a crustal context, where numerical modelling can be constrained by field evidence. Although volumetrically limited (4.5 km<sup>3</sup>), PIC is composed by multiple pulses with K-affinity intruded over a short time span. These pulses correspond to the emplacement of amphibole and biotite-bearing silica saturated (pyroxenites/gabbros to syenites), silica undersaturated (gabbros to syenites) and granitic/syenogranitic rocks. To unravel the T-P-fO<sub>2</sub> and H<sub>2</sub>O conditions of the various intrusive pulses, we developed a multiple approach, based on the concomitant application of “classical” (i.e. specific for intrusive rocks) and “less conventional” methods (i.e. designed for effusive rocks). Such a process allowed the reconstruction of the entire T-P evolution of the PIC magmas, starting from the generation of the main cumulus phases (clinopyroxene) to the latter crystallization of the intercumulus assemblages, mainly made of amphibole, biotite and K-feldspar. A simulation of the progressively evolving melt compositions enabled us to retrieve their T-P-H<sub>2</sub>O paths by means of several thermobarometric, oxybarometric and hygrometric equations (e.g. Burkhard 1991; Anderson 1996; Putirka 2008; Lange et al. 2009; Masotta et al. 2013) and by the application of the Rhyolite-MELTS software (Gualda et al. 2012). In contrast to what proposed in literature, the emplacement of the PIC occurred at shallow depth (< 6 km), in a temperature range of 1000-1100°C to ~600°C and at fO<sub>2</sub> between -0.1 and +0.7 ΔFMQ. H<sub>2</sub>O content of less differentiated magmas varies between 1.0-1.5 and 2.0-2.5 wt%. These results, other than confirming what hypothesized by the field evidence, highlight the peculiarity of this complex, which can be considered a snapshot of a shallow crustal magmatic plumbing system.
