Table of Contents

Preface and Introduction	1
Preface: CERME14 – finally in Bozen-Bolzano	
. . . <i>Carl Winsløw</i>	2
Introduction to the proceedings of the fourteenth Congress of the European Society for Research in Mathematics Education (CERME14)	
. . . <i>Marianna Bosch, Susana Carreira, Giorgio Bolondi, Michael Gaidoschik, and Camilla Spagnolo</i>	4
Plenary Lectures	9
Old and new landscapes for mathematics curricula: reflections from an Italian experience	
. . . <i>Ferdinando Arzarello</i>	10
Climate change and the mathematics curriculum: gestures and entanglements for the future	
. . . <i>Alf Coles and Kjellrun Hüs Hauge</i>	34
The new role of data in society: Challenges and opportunities for mathematics education in the age of data science and AI	
. . . <i>Rolf Biehler and Michelle H. Wilkerson</i>	59
TWG 01: Argumentation and Proof	97
Introduction to Thematic Working Group 1: Argumentation and Proof	
. . . <i>Andreas Moutsios-Rentzos, Orly Buchbinder, Nadia Azrou, Dimitrios Deslis, Viviane Durand-Guerrier, David A. Reid and Mei Yang</i>	98
Integrating Fallibilism and Formal Logic: A Peircean Approach to Lakatos' Methodology	
. . . <i>Miglana Asenova</i>	102
Presumed criteria of validity of proof drive student teachers' actions in conjecturing and proving: a case study	
. . . <i>Paolo Boero</i>	110
Linguistic analysis of beginning mathematics teachers' discourse about reasoning and proof	
. . . <i>Rebecca Butler and Orly Buchbinder</i>	118
Examining teachers' motivational views on Lakatos-style investigation: A value-cost-expectancy approach	
. . . <i>Dimitrios Deslis, Andreas J. Stylianides and Mateja Jamnik</i>	126
A sixth-grade student's first instance of mathematical proof	
. . . <i>Merve Dilberoğlu, Erdinç Çakıroğlu and Çiğdem Haser</i>	134
A model-theoretic approach for didactics research on proof and proving in mathematics	
. . . <i>Viviane Durand-Guerrier</i>	142
Justification not Proof as the Scope of Research: The RPA Model of Argumentation	
. . . <i>Christian Fahse and Tim Lutz</i>	150
A framework for refutations to recipes and algorithms	
. . . <i>Michael Fischer</i>	158

Investigating the relationship between negating competence and understanding proof by contraposition: A study with Indonesian undergraduate mathematics education students	
. . . <i>Hapipi H and Andreas J. Stylianides</i>	166
Proving the rule for fraction multiplication: What kind of content knowledge is visible in preservice teachers' arguments?	
. . . <i>Andrea Hofmann and Trond Stølen Gustavsen</i>	174
Pre-service teachers developing and using mathematical knowledge for teaching proof	
. . . <i>Kasper Højbjerg</i>	182
Analytic and narrative perspectives on proof and proving in mathematics classrooms - a cultural comparative approach	
. . . <i>Christine Knipping, Fiene Bredow, Takeshi Miyakawa, Hiroki Otani and Yusuke Shinno</i>	190
Recognising the situation for proving is not obvious	
. . . <i>Zoltán Kovács and Eszter Kónya</i>	198
A series of mathematical induction activities to promote deritualization processes	
. . . <i>Latifah Mustofa Lestyanto and Kirsten Pfeiffer</i>	206
Debating the machine: mediations and truth	
. . . <i>Amedeo Matteucci, Francesco Saverio Tortoriello and Ilaria Veronesi</i>	214
Proof awareness and students' proof evaluations	
. . . <i>Andreas Moutsios-Rentzos and Vassiliki Mantziou</i>	222
The use of generic examples in students' conjecturing processes	
. . . <i>Julia Niederquell and Leander Kempen</i>	230
Enhancing Pre-Service Mathematics Teachers' Justification Abilities: Impact of a Brief Intervention on Real Number	
. . . <i>Mehdi Parsinia and Benjamin Rott</i>	238
Studying the role of synergy between paper folding and a Dynamic Geometry Environment in upper secondary students' conceptualization of conditional statement and proof	
. . . <i>Aliki Iliana Perivolari and Giorgos Psycharis</i>	246
How do children in primary school prove?	
. . . <i>Melanie Platz</i>	254
Evaluating arguments: the role of goals and interlocutors	
. . . <i>Marta Saccoletto</i>	262
Using FullProof to develop geometrical reasoning and proof skills within a practicum course for preservice teachers	
. . . <i>Ruthmae Sears and Orly Buchbinder</i>	270
Exploring how affect-related constructs predict students' proof construction competence in algebra and geometry	
. . . <i>Gabriel J. Stylianides, Andreas J. Stylianides, Ling Zhang, Dimitrios Deslis and Jisoo Seo</i>	278
Reasoning and proving opportunities related to Thales' theorem in selected lower secondary textbooks from four different regions	
. . . <i>Kinga Szűcs and Mária Slavičková</i>	286
Collaborative problem solving to foster higher-order thinking skills in mathematics: A systematic literature review	
. . . <i>Haydee Ceballos, Theo van den Bogaart, Jeroen Spandaw, Stan van Ginkel and Paul Drijvers</i>	294
Is it possible to assess the impact of proof assistants on undergraduate students' proofs? Preliminary results	
. . . <i>Clara Sisco and Cécile Owrier-Buffer</i>	296

TWG 02: Arithmetic, Numbers and Operations **298**

Introduction to the work of TWG02: Arithmetic, numbers and operations
 . . . *Ioannis Papadopoulos, Renata Carvalho, Linda Devi Fitriana, Robert Gunnarsson, Eszter Kónya and Elisabeth Rathgeb-Schnierer* 299

Preservice teachers’ decision-making: an empirical study using additive problems
 . . . *Mónica Arnal-Palacián and Nuria Begué* 303

Unveiling number sense performance in preservice primary school teachers through hands-on activity
 . . . *Linda Devi Fitriana, Zoltán Kovács and Christiyanti Aprinastuti* 311

Students’ recognition of characteristics in addition and subtraction problems as prerequisite for flexible mental calculation
 . . . *Timo Flückiger and Elisabeth Rathgeb-Schnierer* 319

Teaching two-digit subtraction with a structural approach in the second grade
 . . . *Éva Fülöp, Hoda Ashjari, Angelika Kullberg and Marie Fredriksson* 327

Improving primary students’ understanding of division
 . . . *Michael Gaidoschik, Myriam Burtscher and Heidi Pechlaner* 335

Number sense towards real numbers
 . . . *Virginia Garrido Adame, Olimpia Figueras, and Minerva Martínez Ortega* 343

Mastering the basic facts of multiplication and division till the end of grade 3 – selected results of a longitudinal study
 . . . *Sandra Gleissberg, Eichler Klaus-Peter, and Seibold Moritz* 351

What is a high-quality solution to an arithmetic task?
 . . . *Robert Gunnarsson, and Ioannis Papadopoulos* 359

Primary school student’s ability in fractions as operators
 . . . *Diana Herreros-Torres, M. Teresa Sanz, Carlos Gómez-Ferragud, Hélia Oliveira, and Renata Carvalho* . 367

Advancing the use of retrieval-based strategies with a new manipulative: The case of Nanuka
 . . . *Sarah Hopkins, James Russo, Jane Hubbard, Ann Roche and Janette Bobis* 375

Pupils’ understanding of numerical pattern: an analysis of pupils’ solutions to similar problems in grades 2 and 3 of primary school
 . . . *Darin Jirotkova and Jana Slezáková* 383

Word problems as a possible means of raising awareness of arithmetical structures
 . . . *Eszter Kónya* 391

Pupils’ Solving strategies of the word problems Fidgets type
 . . . *Karolína Mottlová* 399

Problem posing by preservice teachers: The case of open problems
 . . . *Ioannis Papadopoulos* 407

Toward a conceptualization of %: Some preliminary advances
 . . . *Jerome Proulx* 415

Effects of spoken number words on place value understanding: A comparative study with German and Danish second graders
 . . . *Mia Lene Ransiek and Thomas Rottmann* 423

General explanations – conditions and role in the learning process of a child with special difficulties in learning mathematics
 . . . *Charlotte Rechtsteiner and Michaela Scheffknecht* 431

Tree graph to improve word problem solving involving rational numbers
 . . . *Maria T. Sanz, Carlos Valenzuela García, Sofia Peregrina, Emilia López-iñesta, Francisco Grimaldo and Daniel Garcia-Costa* 439

Pupils with severe difficulties in learning arithmetic: An educational challenge for secondary schools
 . . . *Volker Ulm, Annalisa Steinecke and Moritz Zehnder* 447

Assessing students' conceptual place value understanding at the end of primary school ... <i>Gerald Wittmann and Katja Lenz</i>	455
Exploring the strategies utilized by primary pupils to solve equal group multiplication problems using the 'Stick and Split' app ... <i>Waqas Bin Sarfraz, Dave Hewitt and Ian Jones</i>	463
TWG 03: Algebraic Thinking	465
An introduction to TWG3 Algebraic Thinking ... <i>Maria Chimoni, Luis Radford, Jorunn Reinhardtsen and Stefan Korntreff</i>	466
Understanding mathematical structures: A contribution to the discourse about the nature of algebraic thinking ... <i>Kathrin Akinwunmi</i>	470
Mathematics teachers' correspondence and covariation approaches to quadratic functions in relation to their covariational reasoning ... <i>Mervenur Belin, Gülseren Karagöz Akar and Işıl İşler Baykal</i>	478
A 6th grade teacher's and students' togethering in the algebra classroom: A process of overcoming emerging dialectical contradictions ... <i>Martin Carlsen and Jorunn Reinhardtsen</i>	486
Employing Erroneous Examples in Refutational Text to Address Misconceptions in Equations and Inequalities ... <i>Konstantinos P Christou, Courtney Pollack and Eleni Karagiannidou</i>	494
From Inductive to Deductive Reasoning: Investigating Grade 6 Students' Algebraic Thinking Abilities ... <i>Pitta-Pantazi Demetra, Maria Chimoni and Christou Constantinos</i>	502
The development of a reference epistemological model of upper secondary school algebra in Sweden ... <i>Matilda Hällback and Olov Viirman</i>	510
Assessing students' emerging awareness of algebraic structures ... <i>Anna Holmlund and Johanna Pejlare</i>	518
Overcoming the letter-as-object misconception in 4 weeks? An analysis of latent class transitions and contributing teaching practices ... <i>Katrin Klingbeil and Filip Moons</i>	526
Enhancing students' conceptual understanding of variables with interactive instructional videos in a knowledge organization phase ... <i>Stefan Korntreff and Susanne Prediger</i>	534
A case study of a seven-year old's reasoning with and understandings of function graphs ... <i>Nathan Liao, Susanne Strachota, Mathías A. Lopez, Bárbara M. Brizuela, Maria Blanton and Angela Gardiner Gardiner</i>	542
Teachers' conceptualizations of slope in teaching Grade 8 students ... <i>Marios Pittalis and Panagiotis Gridos</i>	550
Cartesian graphs and co-variational thinking in early algebra ... <i>Luis Radford</i>	558
Linking a table and a graph of a function: Slovak case ... <i>Daniela Šabaková and Ingrid Semanišínová</i>	566
Race among the number line: Functional thinking among primary school students ... <i>Stephan Tomaszewski and Marcus Nührenbörger</i>	574
Constructing varying relationships of quantities and writing equations with fractions: A preliminary analysis of representations produced by Japanese and Turkish teachers ... <i>Zelha Tunç-Pekkan, Keiko Hino, Hisae Kato and Hiraku Ichikawa</i>	582
Proportional reasoning unleashed: How gifted minds tackle diverse proportional reasoning tasks ... <i>Zeynep Tuncer, Berna İnci and Mine İşksal Bostan</i>	590

Experts' structuring processes of equations that can be solved with varying efficiency: An analysis of gaze paths with eye-tracking	
. . . <i>Christof Weber and Georg Bruckmaier</i>	598
Predictive validity of the algebra concept inventory	
. . . <i>Claire Wladis, Eileen Murray and Geillan Aly</i>	606
Comparison of structural sense in limit tasks between first and final year engineering students	
. . . <i>Gloria del Carmen Cancec-Murillo, Pablo Flores Martínez and Teresa Rojano Ceballos</i>	614
Strategies used by students with autism to complete repeating patterns	
. . . <i>Juncal Goñi-Cervera, Irene Polo-Blanco, Maria Chimoni and Demetra Pitta-Pantazi</i>	616
TWG 04: Geometry Teaching and Learning	618
Geometry Teaching and Learning at CERME14: TWG4 Synthesis Report	
. . . <i>Alik Palatnik, Lina Brunheira, Taro Fujita, Chrysi Papadaki and Petra Surynková</i>	619
Applying Duval's Teaching Sequence to 7th-Grade Geometry: A Case Study on the Area of a Disc	
. . . <i>Branka Antunović</i>	623
Generating 3D virtual models of straight-line helicoids in GeoGebra by animations	
. . . <i>Daniela Bimova, Jiří Břehovský and Petra Pirklova</i>	631
Designing tasks to connect geometry and art – developing spatial reasoning using tiling	
. . . <i>Lina Brunheira and Cristina Loureiro</i>	639
Insights into conceptual breaks of individual sine concepts	
. . . <i>Maximilian Büttner and Giada Viola</i>	647
First graders' conceptions and linguistic descriptions of geometric shapes	
. . . <i>Şahin Danişman and Duygu Arabacı</i>	655
Encountering improper points through geogebraization	
. . . <i>Agnese Del Zozzo</i>	663
Theories for the use of both physical and digital tools for developing	
. . . <i>Taro Fujita, Kotaro Komatsu, Satoshi Enomoto and Shogo Obayashi</i>	671
Fostering Understanding of Inclusion Relationships Through Mathematical Events	
. . . <i>Aehsan Haj-Yahya, Juhaina Shahbari and Huda Shayeb</i>	679
Subjective theories of teacher trainers as to how to initiate argumentation and proving processes for geometry in lower secondary school classrooms	
. . . <i>Stefan Halverscheid</i>	687
Fostering students' geometric and spatial reasoning in geometry using duo of digital and tangible artefacts	
. . . <i>Liyang Huang and Taro Fujita</i>	695
Working with student solutions to understand geometry knowledge of preservice teachers	
. . . <i>Daniela Kovalčíková and Ingrid Semanišínová</i>	703
Geometry to be taught in Taiwanese and Japanese junior high schools	
. . . <i>Takeshi Miyakawa and Yi-Wen Su</i>	711
Developing geometrical reasoning skills in primary school	
. . . <i>Shogo Obayashi and Taro Fujita</i>	719
High School Mathematics Teachers' Support for Students' Focus on the Properties of Geometric Solids Using Dynamic Geometry Software	
. . . <i>Samet Okumus and Karen Hollebrands</i>	727
I see what you're thinking: Embodied collaborative argumentation	
. . . <i>Alik Palatnik, Dor Abrahamson and Catalina Lomos</i>	735
Analysis and categorization of errors in the geometry of prospective primary teachers	
. . . <i>Petra Pirklova, Jiri Brehovsky and Daniela Bimova</i>	743

On the mutual relationship of different construction tools and mathematical concepts	
. . . <i>Marc Sauerwein</i>	751
3D printed manipulatives as an aid in constructing parallel and central projections of solids	
. . . <i>Petra Surynkova</i>	759
Teaching the concept of minimal definition with the CoD Method	
. . . <i>Leonardo Tortorelli and Francesco Saverio Tortoriello</i>	767
Dimensions of conceptual knowledge and geometric constructions	
. . . <i>Lukáš Vízek and Libuše Samková</i>	775
The role of perceptual clues in 3D enumeration tasks	
. . . <i>Edgar Alstad and Maren Berre</i>	783
Mathematics laboratory on geometric transformations at the museum	
. . . <i>Michela Maschietto and Beatrice Battilani</i>	785
TWG 05: Probability and Statistics Education	787
Reimagining Statistics and Probability Education in the Age of Data and AI: An introduction to the work of TWG05	
. . . <i>Aisling Leavy, Daniel Frischemeier, Sibel Kazak, Orlando Rafael González, Luca Lamanna and María Magdalena Gea</i>	788
Reconsidering Basic Resources for Modern Statistics Teaching and Learning: Opening the Dialogue	
. . . <i>Dionysia Bakogianni and Maria Meletiou-Mavrotheris</i>	795
How students justify the usability of self-built machine learning models	
. . . <i>Katharina Bata, Angela Schmitz and Andreas Eichler</i>	803
A classroom experiment: the impact of teaching correlation and regression on students' knowledge of the equation of a line	
. . . <i>Balázs Boller</i>	811
Risk literacy – a hybrid conceptualization	
. . . <i>Marie-Theres Brehm and Angelika Bikner-Ahsbabs</i>	819
Can you explain the surprising result? About students' arguments in the context of risk literacy before and after working with a simulation	
. . . <i>Theresa Büchter, Andreas Eichler, Nora Vogel and Karin Binder</i>	827
How do future teachers interpret a pupil solution to a probabilistic task involving proportionality?	
. . . <i>María Burgos, María del Mar López-Martín and Veronica Albanese</i>	835
Statistical literacy in middle school students' performance of speech acts when reacting to data-based arguments on social media	
. . . <i>Christian Büscher</i>	843
Facilitating elementary school students' transitioning from statistical modeling of to statistical modeling for	
. . . <i>Michal Dvir</i>	851
Novice Students' Engagement with Big Data Modeling	
. . . <i>Ronit Gafny, Michal Dvir and Dani Ben-Zvi</i>	859
Informal conceptions of appropriate choropleth maps held by in-service Southeast Asian teachers	
. . . <i>Orlando Rafael Gonzalez</i>	867
Richness of reflective processes on algorithmic decision-making systems by prospective teachers	
. . . <i>Susanne Hilger and Carina Büscher</i>	875
Middle Grade students' objectification of probability in a computer simulation-based environment	
. . . <i>Kjærland Iversen and Amrit Bahadur Poudel</i>	883

Exploring the structure of enumerations in combinatorial problem solving: a case study with Italian secondary school students	
. . . <i>Luca Lamanna and Laura Branchetti</i>	891
Empowering Statistical Learning: The Impact of Growth Mindset on Students' Attitudes towards Statistics	
. . . <i>Aisling Leavy, Esma Emmioglu-Sarikaya, Caterina Primi and Candace Schau</i>	899
Bringing math into politics: the Decision Theatre Lab and the influence of model knowledge on the interpretation of stochastic simulation results	
. . . <i>Christoph Lieben and Sinah Gürtler</i>	907
Problem solving and argumentation in probability context: analysis of some examples of necessary object-level narratives	
. . . <i>Francesca Martignone, Daniele De Giorgi and Marta Saccoletto</i>	915
Type of table and reading levels promoted by Spanish textbooks	
. . . <i>Jocelyn D. Pallauta, María M. Gea, Carmen Batanero and Pedro Arteaga</i>	923
Teaching data-driven machine learning in mathematics education	
. . . <i>Sarah Schönbrodt and Martin Frank</i>	931
A local instruction theory to strengthen students' grasp on graphs	
. . . <i>Lonneke Boels</i>	939
Transferring responsibilities to students in a statistics inquiry through an inter-grade study and research path	
. . . <i>Maria-Josep Freixanet de la Iglesia, Montserrat Alsina Auback, Marianna Bosch Casabò</i>	941
Gaining insight – developing eye-tracking vignettes for teacher training on misinterpretations of statistical graphs	
. . . <i>Ayline Heursen, Saskia Schreiter, Vuslat Seker, Anita Alexander, Lonneke Boels, Frank Reinhold, Martin Abt, Wim Van Dooren and Markus Vogel</i>	943
Data science modules for preservice teacher education	
. . . <i>Susanne Podworny, Sibel Kazak and Aisling Leavy</i>	945
Investigating students' co-construction of statistical argumentation	
. . . <i>Carlotta Vielmo</i>	947
Case study of a learning environment for collecting and analysing real data in mathematics classrooms with the toolkit senseBox	
. . . <i>Anna-Marietha Vogler and Kirstin Erath</i>	949
TWG 06: Applications and Modelling	951
Introducing the CERME14 papers and posters in, and work of, TWG6: Application and Modelling	
. . . <i>Jonas Bergman Ärlebäck, Britta Eyrich Jessen, Gilbert Greefrath, Serife Sevinc, Yana Lacek and Katrin Vorhölter</i>	952
The wheel of mathematical modelling: Seeking new perspective	
. . . <i>Jonas Bergman Ärlebäck, Serife Sevinc and Lluís Albarracín</i>	960
Modelling indoors and outdoors: A comparison of the student's interest and competence development in two task settings	
. . . <i>Simon Barlovits, Anton Kunz and Matthias Ludwig</i>	968
Students' managing of modelling problems with superfluous data	
. . . <i>Caterina Bassi and Rosa Iaderosa</i>	976
Portfolio as a form of assessment for mathematical modelling with digital tools - Advantages and challenges from students' perspective	
. . . <i>Catharina Beckschulte, Jascha Quarder, Stanislaw Schukajlow and Samuel Blankenstein</i>	984
Teacher's actions in class discussions after solving a Fermi problem	
. . . <i>Mireia Brunet-Biarnes and Lluís Albarracín</i>	992

University students learning to model through large amount of data, simulations and ChatGPT	
. . . <i>Louise Meier Carlsen and Britta Eyrich Jessen</i>	1000
How do teachers manage the phase of horizontal mathematization during the implementation of a modelling task? A case study	
. . . <i>Marina De Simone and Yana Lacek</i>	1008
Assessment in a two-dimensional curriculum: The case of solid geometry and modelling supported by an “empty” modelling cycle	
. . . <i>Stig Eriksen and Martin Nordskog</i>	1016
How do pre-service teachers interact with IA to solve modelling problems? Characterising the use of ChatGPT in solving Fermi problems	
. . . <i>César Gallart, Irene Ferrando, Carlos Segura and Lluís Albarracín</i>	1024
Mathematical knowledge mobilised by a group of prospective mathematics teachers when developing a modeling project	
. . . <i>Jeannette Galleguillos</i>	1032
Making the Invisible Visible: Exploring the Situation Model	
. . . <i>Isabella Gogesch and Matthias Ludwig</i>	1040
Financial literacy and mathematical modelling: an analysis of PISA sample tasks	
. . . <i>Gilbert Greefrath and Katharina Kirsten</i>	1048
One step at a time? – An empirical study on the use of graphical representations for Fermi problems	
. . . <i>Simone Jablonski, Julia Ehemann, Deng-Xin Ken Oehler and Matthias Ludwig</i>	1056
The role of transpositive analyses when discussing modelling in disruptive times	
. . . <i>Britta Eyrich Jessen</i>	1064
Secondary students’ multifaceted perceptions of the role of data from the perspectives of models, modelling and information	
. . . <i>Takashi Kawakami and Jonas Bergman Ärlebäck</i>	1072
The role of recursivity and reversibility in mathematical modelling: The bakery mould	
. . . <i>Marcos Marí Bofill, Marianna Bosch Casabò and Berta Barquero Farràs</i>	1080
Students’ use of benchmarks in the process of solving Fermi problems	
. . . <i>Marlena Meyer and Greefrath Gilbert</i>	1088
Didactic transposition constraints on modelling at upper secondary level: Comparing France and Norway	
. . . <i>Elsa Puchaczewski, Marianna Bosch and Heidi Strømskag</i>	1096
Modelling in the learning of the definite integral for civil engineering	
. . . <i>Mariela Elizabeth Ramírez Inca and Hugo Rogelio Mejía Velasco</i>	1104
In-service teachers’ scaffolding practices based on diagnosing modelling challenges during instruction	
. . . <i>Liron Schwartz-Aviad and Zehavit Kohen</i>	1112
Mathematical modelling as part of a general education in mathematics classrooms - challenge for teachers, responsibility for researchers	
. . . <i>Hans-Stefan Siller and Katrin Vorhölter</i>	1120
The evanescence of mathematical models and modelling in the teaching of combinatorics	
. . . <i>Susana Vásquez Elias, Berta Barquero Farràs and Marianna Bosch Casabò</i>	1128
Pre-service teachers’ judgments of students’ solutions to open modeling problems: How important is it to make assumptions?	
. . . <i>Katharina Wiehe, Catharina Beckschulte and Stanislaw Schukajlow</i> ,	1136
The dishwasher experience: Pre-service teachers’ use of extramathematical knowledge while investigating societal topics	
. . . <i>Suela Kacerja, Lisa Steffensen and Trine Foyen</i>	1144
Bridging mathematics and sustainability: Exploring the role of sustainability in mathematics education	
. . . <i>Carolin Kammrad and Michael Meyer</i>	1146

TWG 07: Mathematics for Work, Society and Personal Development: Lifelong Learning **1148**

An introduction to TWG7: Mathematics for work, society and personal development - lifelong learning
 . . . *Pauline Vos, Oda Heidi Bolstad, Javier Díez-Palomar, Michele Giuliano Fiorentino and Peter Frejd* . . . 1149

Mathematical literacy – What is missing?
 . . . *Oda Heidi Bolstad* 1158

The shaping of mathematics teacher identities in vocational education through a whole organisational approach
 . . . *Diane Dalby* 1166

Discussing “Numeracy” beyond the scientific community. How adult learners define numeracy and what challenges arise from that for the coming future
 . . . *Javier Díez-Palomar and Kees Hoogland* 1174

Mathematics and vocational disciplines: a co-disciplinary perspective to reduce early leaving school
 . . . *Michele Giuliano Fiorentino and Antonella Montone* 1182

Theorizing how citizens and vocational workers interact in co-productivity chains with professional mathematicians
 . . . *Peter Frejd and Pauline Vos* 1190

Mathematics workshops in prison: design and practice
 . . . *Sofia Galli, Giulia Bernardi, Domenico Brunetto, Helena Dell’Anna and Francesco Nappo* 1198

Teachers’ ways of experiencing educationally significant vocational mathematics knowing
 . . . *Hanna Knutson* 1206

Not just threats and weaknesses: seeking opportunities for the teaching/learning of mathematics in prison schools
 . . . *Federica Mennuni, Andrea Maffia, Luca Decembrotto and Veronica Manzoni* 1214

Subject integrated team teaching vs. textbook learning: A comparative study on students’ experiences in vocational mathematics education
 . . . *Karolina Muhrman and Peter Frejd* 1222

Learning Math in Prison: Preliminary outputs of an Educational Design Research
 . . . *Silvia Regola, Luca Decembrotto, Federica Mennuni and Veronica Manzoni* 1230

Complexities when students authenticate aspects of a task in vocational mathematics education
 . . . *Trude Sundtjønn* 1238

Measuring adults’ numeracy: Which instruments are used and what do they measure?
 . . . *Marieke Bor-de Vries, Lonneke Boels, Tamara Madern, Kees Hoogland and Paul Drijvers* 1246

How is Europe doing on Numeracy in the 2nd cycle of PIAAC?
 . . . *Kees Hoogland and Javier Díez-Palomar* 1248

Numeracy in social work education
 . . . *Hugo Mulder, Monica Wijers, Sabine de Vries and Lonneke Boels* 1250

Adults studying for a general certificate in secondary education (GCSE) in mathematics in England: self-efficacy, anxiety and examination grades
 . . . *Jennifer Mary Stacey* 1252

Bridging the gap: Facilitating female adult learners in the East Midlands region of England to re-engage with mathematics
 . . . *Farhat Syeeda, Fay Baldry and Ben Harvey-Ashenhurst* 1254

TWG 08: Affect and the Teaching and Learning of Mathematics **1256**

Introduction to the work of TWG08: Affect and the teaching and learning of mathematics
 . . . *Chiara Andrà, Domenico Brunetto, Robin Göller, Inés M. Gómez-Chacón, Janina Krawitz and Hanna Viitala* 1257

The COIF model: Modelling the evolution of student states during collaborative sessions	
. . . <i>Helena Dell’Anna and Domenico Brunetto</i>	1262
You are what you feel? – How primary teacher students’ identification as mathematicians and teachers relates to other affective variables	
. . . <i>Lara Gildehaus</i>	1270
Emotions grounded in mathematics-specific personal epistemology	
. . . <i>Robin Göller</i>	1278
Connections between epistemic emotions and control actions in Linear Algebra	
. . . <i>Inés M. Gómez-Chacón and Adrián Bacelo</i>	1286
“Calculating with numbers and then finding a specific result” – Exploring students’ conceptions about mathematics and doing mathematics and possible relations to mathematics teaching	
. . . <i>Ramona Hagenkötter</i>	1294
Mathematics teachers support on valuing mathematics: The role of mathematical self-concept	
. . . <i>Anwaril Hamidy, Maike Vollstedt and Christoph Duchhardt</i>	1302
Bridging commognition and complexity theory for the study of identity and ritual participation in mathematical learning	
. . . <i>Einat Heyd-Metzuyanin</i>	1311
Problem posing and motivation: Does reformulating problems into easier versus more difficult versions affect students’ expectancies for success, task value, and costs?	
. . . <i>Janina Krawitz and Katharina Wiehe</i>	1319
Decoding emotions in relation to perceived difficulty: How primary students engage with mathematical tasks	
. . . <i>Bianca Nicchiotti, Ilaria Paternoster and Camilla Spagnolo</i>	1327
Strategy-based motivation regarding questioning: Self-efficacy, values, costs, and gender	
. . . <i>Stanislaw Schukajlow, Pia Köhler and Alexander Westhölter</i>	1335
Perceived difficulty of a mathematical task: do in-service and pre-service teachers have a common view?	
. . . <i>Camilla Spagnolo and Chiara Andrà</i>	1343
The effects of classroom quality on students’ lesson-specific mastery experiences on easy, medium difficulty, and hard tasks	
. . . <i>Karin Elisabeth Sørliè Street, Lars-Erik Malmberg and Gabriel J. Stylianides</i>	1351
ChatGPT is going to replace us! Or not? “Narrative Insight” about secondary-tertiary transition in mathematics	
. . . <i>Gaia Turconi, Domenico Brunetto and Giulia Bernardi</i>	1359
Lower secondary pupils’ academic motivation in a collaborative problem-solving intervention	
. . . <i>Hanna Viitala</i>	1367
Mindset and Mathematics Achievement: Mediating Effects of Anxiety and Learning Motivation	
. . . <i>Shaoyilin Wang and Yan Zhu</i>	1375
Theoretical framework linking teacher feedback and students’ mathematics self-efficacy, attributions, and mathematics achievement	
. . . <i>Rohit Daniel</i>	1377
Emotion graphing: Tool to study emotions and foster meta-affect	
. . . <i>V. Rani Satyam</i>	1379

TWG 09: Interaction, Communication and Language in Mathematics Education1381

Interaction, communication and language(s) in mathematics education: The work of TWG09	
. . . <i>Jenni Ingram, Kirstin Erath, Máire Ní Riordáin, Alexander Schüler-Meyer and Ingólfur Gíslason</i> . . .	1382
Characterisation of student’s initiatives in whole class discussions	
. . . <i>Christoph Aumann and Kirstin Erath</i>	1390

Teacher guidelines during group work	
. . . <i>Dorottya Bessenyei</i>	1398
Contrasting meanings of '0' in bilingual primary school settings	
. . . <i>Malte Bürgstein and Elke Söbbeke</i>	1406
Mathematical discourse changes during the introduction phase of the early years - A textbook perspective	
. . . <i>Irina Johansson Carlén, Clas Olander and Ulrika Ryan</i>	1414
Impacts of multilingualism on mathematical learning in primary school - Focusing on everyday language differences	
. . . <i>Sonja Deegener, Marei Fetzer and Marijana Gregurević</i>	1422
Classroom discourse and positioning: A case study of a highly regarded teacher	
. . . <i>Ove Gunnar Drageset and Malin Skoglund</i>	1430
On the linguistic complexity of mathematics school-leaving exams: Differences between subject areas	
. . . <i>Louisa Mana Ebel</i>	1438
On using operators to introduce negative numbers: How do students describe states and transformations?	
. . . <i>Melina Fabian and Ulrich Kortenkamp</i>	1446
Using Maltese meaning-related vocabulary for the topic 'Equivalent Fractions' in a bilingual Grade 6 classroom in Malta	
. . . <i>Marie Therese Farrugia</i>	1454
The impact of multilingualism on mathematical teaching-learning situations	
. . . <i>Marijana Gregurević and Marei Fetzer</i>	1462
Childrens' block play language and the manifestation of mathematical content	
. . . <i>Esther Henschen and Martina Teschner</i>	1470
Semantic profiles in screening 6-year-olds' spatial sense and reasoning in Sweden: The impossible of not being a teacher	
. . . <i>Sergej Ivanov and Andreas Ebbelind</i>	1478
Investigating pre-service mathematics teachers' requests for information in one-to-one tutoring	
. . . <i>Sara Emelie Rut Julsgård</i>	1486
Linguistic demands and more: A framework for analysing mathematics lessons	
. . . <i>Elizabeth Kimber, Jenni Ingram, Núria Planas and Gabriel Chun-Yeung Lee</i>	1494
German upper-secondary students' use of discourse practices and lexical means related to the scalar product	
. . . <i>Olga Lomas and Lena Wessel</i>	1502
Language-responsive support for connecting understanding division and fraction division: A design research case study	
. . . <i>Jessica Mähnert and Kirstin Erath</i>	1510
The connection between task design and how algebraic variables and constants are described	
. . . <i>Tamsin Meaney, Silke Lekaas and Eugenia Ferrari</i>	1518
Noticing aspects of the mathematical discourse in a developmental context on teaching angles	
. . . <i>Juan Gabriel Rave-Agudelo and Núria Planas</i>	1526
Teacher responsiveness and didactical decision-making in a multilingual mathematics classroom	
. . . <i>Shintia Revina and Alexander Schüler-Meyer</i>	1534
Fostering mathematical explanations through LLM-based tasks	
. . . <i>Hanna Eckhardt and Daniel Thurm</i>	1542
Teaching AI about epistemic logic puzzles: Directing attention	
. . . <i>Ingólfur Gíslason</i>	1544

TWG 10: Diversity and Mathematics Education: Social, Cultural and Political

Challenges

1546

Report to TWG10: Social, Cultural and Political Aspects of Mathematics Education	
. . . <i>Timo Dixel, Laura Black, Mariam Makramalla, Juuso Henrik Nieminen, Sabrina Salazar and Daniela Steflitsch</i>	1547
Beyond performance in mathematics results: gender differences and situated knowledge in the “Tennis tournament” item	
. . . <i>Ginevra Aquilina</i>	1551
Discourses on mathematics and mathematical ability of support teachers in Italy	
. . . <i>Francesco Beccuti and Maria Polo</i>	1559
Mathematical empowerment and participation in inclusive learning settings	
. . . <i>Anna-Maria Billigen and Elke Söbbeke</i>	1567
Creating a task to prepare instructors to teach postsecondary mathematics	
. . . <i>Sabrina Bobsin Salazar and Eduardo da Silva Schneider</i>	1575
Planning for Equity: Does Universal Design for Learning hold promise for mixed-ability mathematics classrooms? A Scoping Review.	
. . . <i>Aibhin Bray, Cian McKenna and Elizabeth Oldham</i>	1583
‘Have-been-doing masculinity’ - emerging gender stereotypes in mathematicians’ descriptions of their memories of mathematics lessons	
. . . <i>Julchen Brieger, Jule Aufschneider and Marie-Christin Aust</i>	1591
Exploring educational resources through sociopolitical lenses: Initial insights from a study of mathematics textbooks	
. . . <i>Cristina Marjorie Da Cruz, Luciana Vieira Andrade, Ana Paula Perovano and Zsolt Lavicza</i>	1599
Empowering and disempowering students in a school project on sustainability	
. . . <i>Trude Fosse and Kjellrun Hiis Hauge</i>	1607
What does it take to make a change? Pre-service teachers’ positionality when working with mathematics inspired by Critical Mathematics Education	
. . . <i>Trine Foyn, Suela Kacerja and Lisa Steffensen</i>	1615
Bridging the political and the historical in mathematics education: a dialogue with in-service teachers	
. . . <i>David Guillemette</i>	1623
Curriculum: A restricted or restricting Resource?	
. . . <i>Katharina Jablonka and Reza Sutan Putra Nazir</i>	1631
Cultivating teacher leaders in hierarchical schools and school systems	
. . . <i>Richard Kitchen, Lorenzo Gonzales, Monica Martinez-Archuleta and Ali Bicer</i>	1639
Contribution to sustainability competences through mathematics education	
. . . <i>Paula López-Serentill, Nataly Pincheira, Marta Gual and Angel Alsina</i>	1647
Mathematics Education and the arenas of new conflicts over inequality - a theoretical framework for research?	
. . . <i>Andrea Neuenfeldt and Timo Dixel</i>	1655
I wish someone could remove all the text from the math book	
. . . <i>Eva Norén and Anna Wallin</i>	1663
Patterns of mathematics capital among Swedish higher education mathematics students	
. . . <i>Lisa Österling, Nhu Truong, Paola Valero, Anna Danielsson, Maria Berge and Bruna Nunes</i>	1671
Gender differences in optimistic, realistic, and pessimistic mathematical self-concepts among first-year STEM students	
. . . <i>Pia Tscholl</i>	1679
Active listening for storylines experienced by Indigenous and newly migrated mathematics students	
. . . <i>David Wagner, Sacha DeWolfe, Julianne Gerbrandt and Zyrene Estallo</i>	1687
Categorising subjective relevance of mathematics education	
. . . <i>Chiara Nadine Wang and David Kollosche</i>	1695

Socially just relationships between mathematics teachers and learners	
... <i>Pete Wright</i>	1703
Gender differences in mathematics education in prison context	
... <i>Giulia De Rocco, Chiara Giberti and Agnese Ilaria Telloni</i>	1711

TWG 11: Teaching and Learning of Discrete and Computational Mathematics 1713

Thematic Working Group 11 Teaching and learning of discrete and computational mathematics	
... <i>Simon Modeste, Sylvia van Borkulo, Ulrich Kortenkamp, Janka Medová and David Zenkl</i>	1714
Shut-the-Box: Fostering computational thinking through the mathematical modelling of games	
... <i>Lukas Bayer and Martin Bracke</i>	1718
Arrow cards as representation when programming educational robots – Algorithmizing as an interplay between encoding and decoding	
... <i>Carina Büscher</i>	1726
Algorithmic thinking in problem solving between Mathematics and Computer Science: a case study in modular arithmetic	
... <i>Marta Crippa, Laura Branchetti, Violetta Lonati and Luca Lamanna</i>	1734
Deterministic Model for objectifying the students’ proving process in Discrete Mathematics	
... <i>Mickael Da Ronch</i>	1742
Investigating the use of programming in the process of creating algebraic expressions in 6th grade	
... <i>Nisa Efe and Emel Özdemir Erdoğan</i>	1750
Superfluous or meaningful integration of programming in mathematics? An analysis of lower secondary textbooks	
... <i>Daniel Fikstvedt, Runar Lie Berge, Andreas Brandsæter and Ingvaldsen Morten Finset</i>	1758
Towards design principles for learning environments based on theorem provers	
... <i>Irene Garnelo and Michael Liebendörfer</i>	1766
Programming in the primary mathematics curriculum in Norway	
... <i>Trond Stølen Gustavsen and Suela Kacerja</i>	1774
Relationship of computational thinking and spatial reasoning when programming educational robots	
... <i>Laura Heibeyn and Carina Büscher</i>	1782
Dragon flights, an unusual introduction of tournaments	
... <i>Péter Juhász and Eszter Bóra</i>	1790
Identifying isomorphism in combinatorial tasks	
... <i>Anna Kuřík Sukniak</i>	1798
Generalizing in combinatorial problem solving: Processes-based or numerical-based approaches	
... <i>Elise Lockwood and Zackery Reed</i>	1806
Integrating computational thinking in the learning of functions in the 8th grade	
... <i>Andreia Mateus, Hélia Oliveira and João Piedade</i>	1814
Use of re-coding strategy while solving problems related to Catalan numbers by undergraduate student	
... <i>Janka Medová and Antonín Jančařík</i>	1822
Assessing Abstraction Skills Among Secondary School Students: A Study of a Blockbased Programming Environment (BBPE) Enhanced by Augmented Reality (AR)	
... <i>Fajar Meirani and Sylvia van Borkulo</i>	1830
“Same, same but different?” – Extending a mathematical problem-solving model to computer science problems	
... <i>Deng-Xin Ken Oehler and Matthias Ludwig</i>	1838
On the use of Conceptual Knowledge from Computer Science in Mathematics Education	
... <i>Reinhard Oldenburg</i>	1846

Using computational thinking to solve the Josephus problem: Insights from participants with different educational backgrounds	
. . . <i>Valentina Postelnicu</i>	1854
Computational problem-solving practices in a Scratch-supported geometry and measurement teaching	
. . . <i>Hümeýra Türkmen and Hatice Akkoç</i>	1862
Investigating students' testing and evaluating as part of computational thinking with the TEC model	
. . . <i>Till von Monkiewitsch and Carina Büscher</i>	1870
Analysing post-intervention mistakes in combinatorial problem solving: A study on Czech secondary students	
. . . <i>David Zenkl and Naďa Vondrová</i>	1878
Computational thinking in mathematics problem solving: interplay between context, mathematics and computer science	
. . . <i>Valérie Batteau, Jana Trgalová and Sébastien Jolivet</i>	1886
Connections between discrete mathematics and other mathematical topics in Hungarian curricula	
. . . <i>Bernadett Szakácsné Györey and Katalin Gosztonyi</i>	1888
Analysis of students' self-written combinatorial word problems	
. . . <i>Charlott Thomas and Birte Pöhler</i>	1890
Underused but powerful: Fostering computational thinking in GSheets on a statistics topic	
. . . <i>Wahid Yunianto, Arie Wibowo and Zsolt Lavicza</i>	1892

TWG 12: History in Mathematics Education **1894**

Introduction to TWG 12: History in Mathematics Education	
. . . <i>Antonio M. Oller-Marcén, Wendy Goemans, Tanja Hamann, Bjørn Smestad, and Marianne Thomsen</i> .	1895
Mathematics education in Belgium inspired by Decroly's pedagogy	
. . . <i>Dirk De Bock and Wendy Goemans</i>	1899
Papy's minicomputer	
. . . <i>Wendy Goemans and Dirk De Bock</i>	1907
Proofs in school geometry and international movements in the Brazilian context	
. . . <i>Maria Célia Leme da Silva, Ana Paula Jahn, Marizete Nink Carvalho and Thiago Pedro Pinto</i>	1915
Mathematics for all, but what mathematics? Comparing the overlap of three coexisting curricula in the mid-20 th century Spain	
. . . <i>Antonio M. Oller-Marcén</i>	1923
New Math: A comparison of the NKMM's curriculum with Norwegian and Swedish curricula	
. . . <i>Hilde Opsal and Bjørn Smestad</i>	1931
The use of two-dimensional figures as means of mathematical justification in complex analysis	
. . . <i>José Gerardo Piña-Aguirre and Rosa María Farfán Márquez</i>	1939
Shaping geometry in secondary schools in Portugal in the early 20th century	
. . . <i>Alexandra Sofia Rodrigues and José Manuel Matos</i>	1947
Iconic representations in Renaissance reckoning books – on the way to a table of classification	
. . . <i>Barbara Schmidt-Thieme and Tanja Hamann</i>	1955
Using word problems from the 16th century in teaching mathematics	
. . . <i>Stela Segev and Tsurit Elitzur</i>	1963
Studying curricular reform through a full-text database of Norwegian textbooks: Findings and methodological considerations	
. . . <i>Bjørn Smestad and Hilde Opsal</i>	1971
Historical awareness and foreground in idea generation processes	
. . . <i>Marianne Thomsen and Inge Marie Lyngsø Olsen</i>	1979

A transformation of perception in calculus: An exploration of barriers and outcomes through transgressive actions	
. . . <i>Mark Watford and Kathleen Michelle Clark</i>	1987

TWG 13: Early Years Mathematics **1995**

Introduction to TWG13: Early years mathematics	
. . . <i>Andrea Maffia, Ergi Acar Bayraktar, Camilla Björklund, Dorota Lembrér, Eva Nováková and Chronoula Voutsina</i>	1996
Performance on addition and subtraction word problems in an online assessment	
. . . <i>Christiane Benz, Axel Schulz and Sebastian Wartha</i>	2000
Cookies on plates – toddlers’ partitioning strategies	
. . . <i>Camilla Björklund and Hanna Palmér</i>	2008
Collaborating on researching mathematical awareness in kindergarten class	
. . . <i>Mette Amalie Bundgaard</i>	2016
Individual Differences in Parental Support for Home-Numeracy in Pre-schoolers with Intellectual Disabilities: A Cluster Analytic Approach	
. . . <i>Garyfalia Charitaki, Anastasia Alevriadou and Maria Kypriotaki</i>	2024
Supporting collective mathematical creativity in first grade	
. . . <i>Michal Cohen and Ester S. Levenson</i>	2032
The influence of linguistic background on early representations of multiplicative comparison	
. . . <i>Ann Downton, Esther Levenson, Andrea Maffia and Nurfar Tobal</i>	2040
From patterns to numbers: Supporting six-year-olds’ discernment of patterns and structure	
. . . <i>Jessica Elofsson, Camilla Björklund and Joanne Mulligan</i>	2048
Becoming confident numeracy players through home play-based early learning activities	
. . . <i>Mellony Holm Graven</i>	2056
Parents’ and teachers’ view on mathematics skills of children with mathematics learning difficulties in pre-school	
. . . <i>Ineta Helmane, Malgożata Raščevska, Dita Nīmantē, Solvita Umbrāško, Andra Vabale, Ieva Bite, Baiba Trinīte, Gundega Tomele and Egija Laganovska,</i>	2064
How teaching actions with artefacts enable children’s understanding of the part-whole relationships in an arithmetic task	
. . . <i>Helen Lindgren, Camilla Björklund and Clara Vidal Carulla</i>	2072
Teachers’ descriptions of mathematics education in preschool in relation to play-responsive teaching	
. . . <i>Maria Lundvin, Hanna Palmér and Camilla Björklund</i>	2080
Robot programming and its influence on itineraries and map-reading skills in early childhood education	
. . . <i>Lígia Gonçalves Nogueira, Teresa Maria Fernández Blanco, Cláudia Manuela Ferreira Maia-Lima and Sara Aboim</i>	2088
Mathematical argumentation in preschool – an exploratory study	
. . . <i>Mona Nosrati, Beate Nergård and Kjersti Wæge</i>	2096
Subjective perception of the readiness of novice kindergarten teachers to develop children’s early years mathematics	
. . . <i>Eva Nováková</i>	2104
Dealing with multiplicative problems in pre-primary education: Analyzing children’s performance and strategies	
. . . <i>Georgia Pitta and Xenia Vamvakoussi</i>	2112
Spatial ability and one-step additive word problems in early childhood	
. . . <i>Jisoo Seo, Gabriel Stylianides and Maria Evangelou</i>	2120

Perceiving and describing structures of kindergarten children	
. . . <i>Priska Sprenger, Ángela Uribe and Barbara Ott</i>	2128
Norwegian preservice teachers' views on the use of digital technology in early childhood institutions	
. . . <i>Mona Karbaschi Vee, Dorota Lembrér and Tamsin Meaney</i>	2136
Opportunities for learning in parent-child discussions about written numbers in everyday life	
. . . <i>Chronoula Voutsina, Lois George and Stephanie Flack</i>	2144
Guardians' views on digital tools in preschool	
. . . <i>Maria Walla, Hanna Palmér and Jorryt van Bommel</i>	2152
Merging or separating mathematics education and play – does it affect learning?	
. . . <i>Lena Karlsson</i>	2160
Finger use for addition and subtraction in preschoolers	
. . . <i>Stephanie Roesch and Jamine Hartmann</i>	2162

TWG 14: University Mathematics Education **2164**

Introduction to the papers of TWG14: University mathematics education	
. . . <i>Irene Biza, Olov Viirman, Ignasi Florensa, Ghislaine Gueudet, Mathilde Hitier and Athina Thoma</i> . . .	2165
Learning assistants' development as mathematics teachers: Insights from an undergraduate to graduate teaching journey	
. . . <i>Rebecca Butler and Orly Buchbinder</i>	2173
Ecology of task design, adaptation, and selection: A phenomenological study with Norwegian mathematics lecturers	
. . . <i>Ahu Canogullari and Farzad Radmehr</i>	2181
Engineering students' experience with the vector cross product in a virtual reality environment	
. . . <i>Bettina Dahl, Olga Timcenko, Mirela Vinerean, Nissim Harel, Imad Abou-Hayt, René Bødker Christensen and Morten Grud Rasmussen</i>	2189
Investigating undergraduates' proof methods in linear algebra	
. . . <i>Anairis de la Cruz Benito and Christine Andrews-Larson</i>	2197
A lukewarm defence of the mathematics lecture	
. . . <i>Amalie Thorup Eich-Høy</i>	2205
Design and implementation of a study and research path for teaching statistics: Impact of the dialectics	
. . . <i>Laura Fernández-Ruano, Kristina Markulin and Noemí Ruiz-Munzón</i>	2213
Disciplinary authorities or fellow educators? Exploring positionings of mathematicians when interacting with secondary teachers	
. . . <i>Myriam Goor, Alon Pinto</i>	2221
Research in undergraduate mathematics education using the concept of didactic contract: results and contradictions?	
. . . <i>Ghislaine Gueudet and Camille Doukhan</i>	2229
Using knowledge from mechanics to solve a calculus task: a study through the lenses of mixed praxeologies	
. . . <i>Mathilde Hitier and Alejandro González-Martín</i>	2237
Using scriptwriting as a response format for interface tasks: Exemplary analyses in the context of symmetry	
. . . <i>Max Hoffmann</i>	2245
From “chalk and talk” to active learning: inter-community partnerships and shifts in pedagogical and mathematical discourse	
. . . <i>Owen Lewis Hooper, Elena Nardi, Irene Biza and George Witty</i>	2253
Towards a research agenda for generative AI in university mathematics education	
. . . <i>Paola Iannone, Irene Biza, Ben Davies, George Kinnear, Juuso Nieminen</i>	2261

Opportunities to Learn as entry points to university mathematical discourse: The case of proof in introductory lectures	
. . . <i>Thomas Karavi and Alexander Schüler-Meyer</i>	2269
The research communication of doctoral students in mathematics	
. . . <i>Rox-Anne L'Italien-Bruneau, Igor' Kontorovich and Ofer Marmur</i>	2277
The role of mathematics in advanced electrical engineering courses: a typical case of numerical integration	
. . . <i>Željka Milin Šipuš, Matija Bašić and Jelena Pleština</i>	2285
Exploring the impact of ChatGPT in teaching numerical methods: Student perceptions, usage and exam performance	
. . . <i>Ferenc István Miskei-Váradi, Fekete Imre and Csaba Csapodi</i>	2293
Permutations with indistinguishable objects: inconsistencies in the university mathematics training of prospective secondary teachers	
. . . <i>Jonathan Morcos and Alejandro S. González-Martín</i>	2301
Mathematical provision across subjects in the pre-university curriculum: Comparing geography, psychology, and sociology undergraduates in England	
. . . <i>Jennifer Norris and Andrew Noyes</i>	2309
Between the trivial and the impossible: CHAT as an analytic lens to study the role of programming in mathematical research	
. . . <i>Jan-Fredrik Olsen, Elise Lockwood and Tor Ole Bigton Odden</i>	2317
An alternative approach to teaching the fundamental concepts of Analysis to first-year university students	
. . . <i>Georgia Petropoulou, Angeliki Mali, Theodossios Zachariades and Despina Potari</i>	2325
Is this a different proof? Mathematicians' and secondary mathematics teachers' practices when comparing alternative proofs	
. . . <i>Alon Pinto</i>	2333
On the conceptual understanding of the notion of a general solution	
. . . <i>Yuriy Rogovchenko and Svitlana Rogovchenko</i>	2341
"How should we solve it?" and "How should we write it down?" Two tacit hurdles in university mathematics discourse	
. . . <i>Miriam N. Wallach and Igor' Kontorovich</i>	2349
An inquiry-oriented approach to least squares in linear algebra	
. . . <i>Megan Wawro, Michelle Zandieh and Zachary Bettersworth</i>	2357
Interweaving university and school mathematics: situated learning opportunities at the transition from university to teaching at school	
. . . <i>Lukas Weith, Anika Dreher, Hendrik Kasten, Denis Vogel and Marita Friesen</i>	2365
Exploring University Students' Mathematical Digital Competency for Communication in Computer-Supported Collaborative Learning	
. . . <i>Wenfei Du, Eirini Geraniou, Cosette Crisan and Jeremy Hodgen</i>	2373
Characterising internal discontinuities in mathematics in engineering education through teachers' views	
. . . <i>Ignasi Florensa, Iria Fraga and Víctor Martínez-Junza</i>	2375
Fostering dialogue between university researchers and upper secondary school teachers on students' mathematical preparation for university studies in STEM subjects in Iceland	
. . . <i>Bjarnheiður Kristinsdóttir and Ingólfur Gíslason</i>	2377
Learning about students' misconceptions with instructional videos and STACK tasks in university courses for teacher education	
. . . <i>Lucia Marchionne, Andreas Eichler, Henrik Floren, Michael Liebendörfer and Mirko Schürmann</i>	2379
Developing and evaluating visual supported STACK tasks for introductory courses in university mathematics	
. . . <i>Sophie Markefka, Maxim Urich, Andreas Bley and Andreas Eichler</i>	2381

"The goal is really to have a correct proof that you can also verify in Lean" – Exploring a lecturer’s perspective of using Lean in teaching	
. . . <i>Athina Thoma and Paola Iannone</i>	2383
Students’ conceptions of polynomial functions and their graphical representations at the secondary-tertiary transition	
. . . <i>Juliette Veuillez–Mainard</i>	2385
The roles and responsibilities of mathematicians in secondary mathematics teacher education: An international perspective	
. . . <i>Olov Viirman, Maria Meehan and Alon Pinto</i>	2387
Research-informed and collaborative reform in university mathematics teaching: The case of secondary to tertiary transition	
. . . <i>George Witty, Owen Hooper, Elena Nardi and Irene Biza</i>	2389

TWG 15: Teaching Mathematics with Technology and Other Resources 2391

Thematic Working Group 15 Teaching mathematics with technology and other resources	
. . . <i>Bärbel Barzel, Gülay Bozkurt, Nicola Bretscher, Eirini Geraniou, Ornella Robutti and Andreas Tamborg</i>	2392
Formation of orchestration chains: linking models	
. . . <i>Seyfettin Alan and Hatice Akkoç</i>	2400
Problem-posing based on digitally enhanced experimental mathematics: What does it demand of teachers?	
. . . <i>Marita Barabash</i>	2408
Incorporating programming into mathematics education: The adaptation of a teacher’s craft knowledge	
. . . <i>Andreas Borg</i>	2416
Beyond digital technology: Exploring transparency as a tool for analysing pre-service teachers’ interpretation of an ideational resource	
. . . <i>Nicola Bretscher, Jill Adler, Tim Clark, Suman Ghosh and Piers Saunders</i>	2424
Evolution of Finch robot orchestrations in teaching primary school mathematics	
. . . <i>Marcus Yuen-Yiu Cheung and Irina Lyublinskaya</i>	2432
The design of artefacts by mathematics teachers’ educators as a window to tension between their actions	
. . . <i>Dimitris Diamantidis and Kynigos Chronis</i>	2440
Generative AI in Mathematics Teaching: lessons from spreadsheets through the lens of double instrumental genesis	
. . . <i>Eirini Geraniou, Manolis Mavrikis, Uffe Jankvist and Morten Misfeldt</i>	2448
Preservice teachers and their computational thinking perspectives	
. . . <i>Khaled Ben Latief Jemai, Toril Eskeland Rangnes, Shipra Sachdeva, Odd Tore Kaufmann and Marianne Maugesten</i>	2456
3DMP and TPACK in professional development: Combining actions and knowledge	
. . . <i>Tim Läufer and Matthias Ludwig</i>	2464
Pedagogical framework for AI literacy integration: Applications for mathematics teaching and learning	
. . . <i>Irina Lyublinskaya and Xiaoxue Du</i>	2472
Integrating Computational Literacy into Primary Mathematics Education: Opportunities for developing mathematical ideas and relationships	
. . . <i>Siri Krogh Nordby and George Gadanidis</i>	2480
Teachers’ challenges when integrating technology into problem posing: Through the lens of instrumental approaches	
. . . <i>Tikva Ovadiya</i>	2488
Teaching computational thinking in a collaborative context: A case study	
. . . <i>Gláucia Rama, João Pedro da Ponte and Marisa Quaresma</i>	2496

Teachers' knowledge and technology: the global model	
. . . <i>Helena Rocha</i>	2504
Resonance of instrumental functions in geometric constructions: Unpacking teacher and student artifact use	
. . . <i>Zahida Sayadi and Abboud Maha</i>	2512
Mathematical problem-posing according to defined educational needs utilizing Generative AI as a lever to enhance pre-service mathematics teachers' TPACK	
. . . <i>Ruti Segal and Biton Yaniv</i>	2520
Teaching computational technology in mathematics education: a comparative analysis of three frameworks	
. . . <i>Andreas Lindenskov Tamborg, Cecilie Carlsen Bach, Camilla Finsterbach Kaup, Raimundo Elicer and Morten Misfeldt</i>	2528
Investigation of the use of AI as a scaffolding tool during mathematical discussion in geometry problem-solving	
. . . <i>Serdem Yavuz and Ayşe Tekin Dede</i>	2536
A pre-service mathematics teacher's digital resource design capacity	
. . . <i>Melike Yiğit Koyunkaya and Gülay Bozkurt</i>	2544
Maths AIde: Can GenAI support mathematics teachers to plan engaging, student centred lessons?	
. . . <i>Eleanor Byrne, Aibhín Bray and Brendan Tangney</i>	2552
Chatbots performance in problem posing: An exploratory study	
. . . <i>Sara Embid and Josefa Perdomo-Díaz</i>	2554
Computational literacy in mathematical problem solving	
. . . <i>Jack Jalal Kallo</i>	2556
Engaging and explorative digital tasks designed by pre-service teachers: A teacher training course design	
. . . <i>Edith Lindenbauer and Eva-Maria Infanger</i>	2558
Developing lower secondary mathematics teachers' ICT competencies: The case of China	
. . . <i>Bohan Liu, Eirini Geraniou, Cosette Crisan and Jeremy Hodgen</i>	2560
Group Instrumental Genesis	
. . . <i>Liv Nøhr, Cecilie Carlsen Bach, Andreas Lindenskov Tamborg and Morten Misfeldt</i>	2562

TWG 16: Learning Mathematics with Technology and Other Resources 2564

Learning mathematics with technology and other resources: A short report from TWG16	
. . . <i>Osama Swidan, Jana Trgalová, Florian Schacht, Eleonora Faggiano, Rogier Bos and Sara Bagossi</i> . . .	2565
The icosahedron in the room: Revisiting pedagogical dilemmas of individual learning in collaborative activities	
. . . <i>Dor Abrahamson, Catalina Lomos and Alik Palatnik</i>	2569
Students' use of feedback when working on fractions with a digital learning platform and its effects on mathematical performance	
. . . <i>Larissa Altenburger and Michael Besser</i>	2577
Supporting cognitive engagement in working with interactive video: Potentials and limitations of video interaction and feedback	
. . . <i>Stephan Bach, Mike Altieri, Stefan Korntreff and Susanne Prediger</i>	2585
Investigating covariational reasoning: a multimodal analysis including eye-tracking data	
. . . <i>Sara Bagossi, Osama Swidan, Aylin Thomaneck, Yotam Vaknin and Maike Vollstedt</i>	2593
Identifying design criteria of digital learning environments for geometry learning: A student-centred approach	
. . . <i>Selina Baldinger and Robert Weinhandl</i>	2601
Programming and mathematics – Experiences using programmable robots in a 6 th grade mathematics class	
. . . <i>Ingeborg Lid Berget and Beate Krøvel Humberstet</i>	2609
Investigating the potential of GenAI as a scaffolding tool in Mathematics Education	
. . . <i>Maria Lucia Bernardi, Federica Troilo, Roberto Capone and Eleonora Faggiano</i>	2617

Examination of eye movements of primary school 4 th -grade students during mathematical problem-solving*	
. . . <i>Çağla Bingül and Yeliz Yazgan</i>	2625
Heuristic trees and their fruits	
. . . <i>Rogier Bos</i>	2633
Changes in abstraction levels among undergraduate students during game programming using Scratch	
. . . <i>Einav Keisar and Michal Tabach</i>	2641
Students' mathematical thinking through programming, animation and 3D printing: Early insights in the case of curvature	
. . . <i>Chronis Kynigos and Katia Schiza</i>	2649
Opportunities for low-achieving students to learn mathematics through design and 3D printing of usable objects	
. . . <i>Laura Levin and Sigal-Hava Rotem</i>	2657
Promoting Euclidean-Taxicab covariational reasoning to enhance understanding of trigonometric concepts in a digital environment	
. . . <i>Annamaria Miranda and Loredana Saliceto</i>	2665
Chat GPT as a didactic tool to improve students' abilities in managing different semiotic representations: a first study.	
. . . <i>Giorgia Nieddu, Maria Cristina Carrisi, Maria Polo and Antioco Luigi Zurru</i>	2673
Students' written and oral verbalizations of a numerical pattern using the tool BookCreator	
. . . <i>Zita Pahlsmeyer and Marcus Nührenbörger</i>	2681
Can you help us? – Task-specific LLM-based support in a digital mathematical escape game	
. . . <i>Lisa Rühl and Daniel Thurm</i>	2689
Three forms of feedback in digital learning material in mathematics	
. . . <i>Seif Sharif, Samuel Bengmark, Laura Fainsilber, Eva Fülöp, Tommy Gustavsson and Johanna Pejlare</i>	2697
Enhancing students' techno-mathematical problem-solving skills: Results from a quasi-experimental study with 5th graders	
. . . <i>Ana Cláudia Simões, Hélia Jacinto, Neuza Pedro and Susana Carreira</i>	2705
Analysis of mixed-types in pre-service teachers' argumentation using a digital tool	
. . . <i>Julia Marie Stechemesser and Florian Schacht</i>	2713
Learning success while working with (interactive) videos on multiplication derivation strategies	
. . . <i>Juliane Wefers</i>	2721
Digital Game-Based Learning in Moroccan Mathematics Education: Insights and Challenges	
. . . <i>Tariq Bouzid</i>	2729
Enhancing mathematics learning through Mixed Reality: The Function Virtuality prototype	
. . . <i>Mosè Colangelo and Andrea Ghersi</i>	2731
LLMs as a tool for problem solving – A case study on the role of generative AI in the solution of Fermi problems	
. . . <i>Marc Herrmann</i>	2733
Programming to inscribe geometric entities in circle and in sphere: an embodied approach of textual programming towards assembling a new Conceptual Field	
. . . <i>Charikleia Korompli</i>	2735
The impact of technology-based collaborative learning on enhancing students' fraction comparison skills	
. . . <i>Nurit Paz-Baruch, Okila Nashif and Iris Schreiber</i>	2737
Moving forward with AR: Effects of augmented reality on learners' solution behaviour in analytic geometry	
. . . <i>Xenia-Rosemarie Reit and Valerie Wachter</i>	2739
Students' acceptance of the multimodality of the social robot Pepper as an educational technology for learning mathematics	
. . . <i>Antonio Vitale, Bruno Carbonaro, Gennaro Cordasco, Umberto Dello Iacono and Anna Esposito</i>	2741

TWG 17: Theoretical Perspectives and Approaches in Mathematics Education 2743

Introduction to thematic working group 17: Centring the function and purpose of theory in mathematics education research

. . . <i>Heather Lynn Johnson, Felix Lensing, Pedro Nicolás, and Amalie Sødal</i>	2744
Interdisciplinarity in STEM education: A category-theoretical model the viewpoint of Mathematics	
. . . <i>Miglana Asenova and Roberto Capone</i>	2752
On the diachronic analysis of a modality of study	
. . . <i>José Ginés Espín Buendía, Josep Gascón Pérez and Pedro Nicolás Zaragoza</i>	2760
Crisis-driven transformation in tertiary mathematics – A case study connecting TTE and ATD	
. . . <i>Lukas M. Günther, Jana Peters and Reinhard Hochmuth</i>	2768
Didactic transposition of structuralist praxeologies at the interface between analysis and topology: a case study	
. . . <i>Thomas Hausberger, Reinhard Hochmuth and Erik Hanke</i>	2776
The professional obligations of mathematics teaching: How measurement and theoretical progress work hand in hand	
. . . <i>Patricio Herbst, Daniel Chazan, Amanda Brown and Karl Kosko</i>	2784
Using theory as a tool to cultivate and analyse research methods: Theorising positioning to examine task-based interviews	
. . . <i>Heather Lynn Johnson, Evan McClintock and Robert Knurek</i>	2792
An interactionist perspective on the negotiation of meaning of mathematical representations	
. . . <i>Sebastian Kollhoff and Kerstin Gerlach</i>	2800
Conceptualising subjective relevance of mathematics education	
. . . <i>David Kollosche and Chiara Nadine Wang</i>	2808
Pre-service teachers' developing professional identity as mathematics teachers - a theoretical perspective	
. . . <i>Beate Lien, Amalie Sødal, Jorunn Reinhardtsen and Martin Carlsen</i>	2816
Rationale and methods for an archive and encyclopaedia of “fundamental didactics”	
. . . <i>Nathan Lombard, Marianna Bosch and Claire Margolinas</i>	2824
Combining a theoretical framework and a statistical measure to assess the reliability of didactic criteria in the analysis of large corpora	
. . . <i>Ismaël Mili, Mickaël Da Ronch and Marie-Line Gardes</i>	2832
Didactic paradigms to promote creativity in the study of mathematics	
. . . <i>Pedro Nicolás, Ginés Espín and Josep Gascón</i>	2840
On the concept of epistemic obstacles and its significance to mathematics education (research)	
. . . <i>Kata Sebök and Felix Lensing</i>	2848
Transposition of research knowledge: From the West to Far East Asia	
. . . <i>Yusuke Shinno and Takeshi Miyakawa</i>	2856
Mathematical heterotopias: Lessons for the mainstream classroom	
. . . <i>Constantinos Xenofontos</i>	2864
Reconceptualizing opportunities to learn mathematics through postfoundational theories	
. . . <i>Ayşe Yolcu, İ. Elif Yetkin-Özdemir, Emine Gül Çelebi and Gökçe Ursavaş</i>	2872
Research mixology: Blending mathematics education & digital sociology for a hybrid approach to experimental design	
. . . <i>Giulia Bini, Sara Gagliani Caputo, Pietro Saccomanno and Diego Ceccobelli</i>	2880

TWG 18: Mathematics Teacher Education and Professional Development 2882

Subjects and objects of research and theories of learning in the education and professional development of mathematics teachers

. . . <i>Marita Friesen, Tracy Helliwell, Fanni Biró, Raffaele Casi, Andreas Ebbelind, Janne Fauskanger, Pere Ivars, Libuše Samková and Gil Schwarts</i>	2883
Teaching fraction multiplication and fraction division to prospective teachers: A design research study	
. . . <i>Theodora Avgeri, Maria Bebeni, Konstantinos Tatsis and Xenia Vamvakoussi</i>	2891
Preservice teachers' collective proportional reasoning in large-format ratio triangles	
. . . <i>Morten Bjørnebye, Bjarte Rom, Henrik Løvik Njølstad and Jonas Oskarsson</i>	2899
Tensions emerging when selecting tasks for problem-solving lessons	
. . . <i>Raymond Bjuland, Janne Fauskanger, Reidar Mosvold and Peter Liljedahl</i>	2907
On making mathematics flourish for students to grasp it: Teachers designing informal mathematics education workshops in museums	
. . . <i>Raffaele Casi and Cristina Sabena</i>	2915
Investigating how secondary school teachers perceive mathematical concepts in application contexts: The case of ratio and chemistry tasks	
. . . <i>Adam Čech and Libuše Samková</i>	2923
Pre-service mathematics teachers' conceptualizations and noticing of algebraic thinking	
. . . <i>Makbule Gozde Didis Kabar and Janet Walkoe</i>	2931
Teaching with technology to foster conceptual understanding: Student level evaluation of a professional development program	
. . . <i>Susanne Digel and Roth Jürgen</i>	2939
Exploring the notion of individuality in research on mathematics teacher education and professional development	
. . . <i>Andreas Ebbelind and Tracy Helliwell</i>	2947
Preservice teachers' professional instrumental genesis for integrating programming in the math classroom: the beginning	
. . . <i>Martyna Katarzyna Fojcik, Marie-Frédérick St-Cyr, Chantal Buteau, Eric Muller and Joyce Mgombelo</i>	2955
Exploring the impact of using silent video task on teacher noticing professional development in mathematics education	
. . . <i>Selen Galiç, Şenol Dost and Zsolt Lavicza</i>	2963
Development of self-reported technological pedagogical and content knowledge (TPACK) during the preparatory service of prospective mathematics teachers in Germany	
. . . <i>Fabian Grünig and Markus Vogel</i>	2971
From "anyway using many representations" to targeted practices: A teacher's professional learning in an asynchronous online PD	
. . . <i>Kerstin Hein, Anne Tester, Lena Böing and Susanne Prediger</i>	2979
Development of the disciplinary identity of the mathematics teacher: A professional development proposal	
. . . <i>Maximiliano Izzi Prato and Francisco Cordero</i>	2987
Planning considerations stated in intended learning outcomes for primary teacher education in Sweden	
. . . <i>Malin Elisabeth Jones</i>	2995
Intertwining theory and practice: Design of planning phases in PD training to support effective teacher planning processes	
. . . <i>Katharina Knaudt, Raja Herold-Blasius and Christoph Selter</i>	3003
Noticing of students' thinking – Is it sufficient for teachers' analysis of interaction in the mathematics classroom? – A vignette-based study	
. . . <i>Sebastian Kuntze, Sigal-Hava Rotem, Yael Nurick, Marita Friesen and Jens Krummenauer</i>	3011

Discourses of diversity in mathematics teacher education research: An analytical tool for meta-didactic prax-ologies	
. . . <i>Natalya Maksym'yak</i>	3019
Preservice teachers' identity as programmers in mathematics	
. . . <i>Marianne Maugesten, Odd Tore Kaufmann, Khaled Jemai, Toril Eskeland Rangnes and Shipra Sachdeva</i>	3027
Exploring mathematics teachers' informal use of an online self-learning platform while planning a digital learning environment	
. . . <i>Sophie Mense</i>	3035
Levels of noticing competence among preservice secondary mathematics teachers in a video analysis of func-tions	
. . . <i>José Luis Morales-Reyes and Diana Zakaryan</i>	3043
Supporting pre-service teachers in learning to promote students' proving: the case of general conjectures	
. . . <i>Reidun Persdatter Ødegaard</i>	3051
Pre-service primary school teachers' curricular noticing: interpreting a sequence of activities about 3D	
. . . <i>Zaira Ortiz-Laso, Antonio Saorín, Melania Bernabeu and Ceneida Fernández</i>	3059
Using textbook analysis in teachers' professional development	
. . . <i>Marte Krohg Østby</i>	3067
Inquiry-based learning through problem posing in pre-service teachers' teaching practice: a study of discursive manifestations of contradictions	
. . . <i>Gresa Pozhegu-Ermeni, Svein Arne Sikko and Benedikte Grimeland</i>	3075
Utilizing a three-phased didactical model in a continuous professional development program for the imple-mentation of inquiry-based mathematics teaching	
. . . <i>Ida Redder Honoré and Louise Laursen Falkenberg</i>	3083
Fostering the perception of ambiguity and the processing of information in complex diagnostic situations	
. . . <i>Andreas Rieu, Katharina Loibl and Timo Leuders</i>	3091
Using scriptwriting to examine how pre-service mathematics teachers anticipate and respond to students' productive struggle	
. . . <i>Sigal-Hava Rotem and Adi Eraky</i>	3099
Shifting from on-site to on-line: How can key design criteria for effective PD be transferred to online, asyn-chronous programs?	
. . . <i>Gil Schwarts and Marita Eva Friesen</i>	3107
Values in mathematics education of potential future teachers on entry to a degree in basic education	
. . . <i>Maria de Lurdes Marquês Serrazina, Joana Castro, Elvira Santos, Ana Silvestre, Hélia Jacinto, Cristina Martins, Manuel Vara Pires, Nélia Amado, Rosa Ferreira and Susana Carreira.</i>	3115
Teaching Simulations as Formative Assessments: Generating Validity Evidence Related to the Test Content	
. . . <i>Meghan Shaughnessy, Timothy Boerst and Rosalie DeFino</i>	3123
Teacher reflections in lesson study: Transition from external to internal support	
. . . <i>Charlotte Krog Skott</i>	3131
The impact of pre-service teachers' basic mathematical knowledge on their university mathematics grades: A case study from Norway	
. . . <i>Morten Søyland and Arne Jakobsen</i>	3139
Teacher professionalisation through the use of a digital diagnostic tool in settings with different forms of additional support	
. . . <i>Anica Stemmer, Katrin Klingbeil and Bärbel Barzel</i>	3147

Learning to assess and respond to children’s mathematical thinking in early arithmetic education: a vignette-based study with pre-service teachers	
. . . <i>Simone Wirth, Marita Friesen, Kathleen Philipp and Christine Streit</i>	3155
Examining the lesson plan designs and reflections of pre service elementary teachers regarding mathematics teaching	
. . . <i>Bilge Yilmaz Aslan and Mehmet Fatih Ozmantar</i>	3163
The Reflective Gaze: A Case Study on Eye-Tracking Technology’s Role in Shaping Mathematics Teacher’s Assessment Identity	
. . . <i>Adi Eraky</i>	3171
Identifying, monitoring and fostering conceptual understanding of the arithmetic mean	
. . . <i>Laura Geldermann</i>	3173
Teachers’ discussions used to explore students’ mathematical writing	
. . . <i>Jonas Jäder</i>	3175
The interplay between mathematics teachers’ professional development and classroom practice: A scoping review	
. . . <i>Therese Karlsson</i>	3177
Teacher noticing framework to examine multiple teaching skills: Analysis of teaching and lesson planning	
. . . <i>B. Sumeyye Kurutas</i>	3179
Learning to teach problem-solving using a four-step lesson structure	
. . . <i>Sabine Lit, Marjolein Kool and Paul Drijvers</i>	3181
Fostering argumentative dialogue in secondary math classrooms: Teacher development trajectories through task-based PD	
. . . <i>Reut Parasha</i>	3183
Teachers in noticing courses, how are they noticing and what do their educators notice about their discussions?	
. . . <i>Jop Schaap, Theo van den Bogaart and Paul Drijvers</i>	3185
Contextualisation and complexity in online rehearsal of feedback: Insights from online mathematics teacher education	
. . . <i>Kristofer Sidenvall</i>	3187
Preservice teachers’ awareness of their own developmental trajectories in primary mathematics teacher education	
. . . <i>Michiel Veldhuis, Sonja Stuber and Ronald Keijzer</i>	3189

TWG 19: Mathematics Teaching and Teacher Practice(s) 3191

An introduction to TWG19: Mathematics Teaching and Teacher Practice(s)	
. . . <i>Reidar Mosvold, Helena Grundén, Mark Hoover, Derek Maher, Qëndresa Morina and Nad’a Vondrova</i> .	3192
Sustainability and Mathematics Education considering the 2030 Agenda: Understandings and Practices of Teacher-Researchers in Portugal	
. . . <i>Andrei Luís Berres Hartmann, Marcus Vinicius Maltempi and António Manuel Dias Domingos</i> . . .	3200
Mathematics teacher practices to foster reasoning and communication through making connections	
. . . <i>Judit Chico, Genaro De Gamboa, Edelmira Badillo and Miguel Montes</i>	3208
Identifying the needs of mathematics teachers during the implementation of new mathematics education goals	
. . . <i>Ilze France, Ildze Cakane and Astrida Cirule</i>	3216
Teacher-student interaction in collaborative problem-solving: In-the-moment perspective on teacher noticing	
. . . <i>Ellen Kristine Solbrekke Hansen and Kristin Krogh Arnesen</i>	3224
Practices in math discourses in inclusive primary school	
. . . <i>Uta Häsel-Weide and Marcus Nührenbörger</i>	3232

The Work of Listening to and Hearing Children’s Mathematical Competence	
. . . <i>Mark Hoover and Deborah Loewenberg Ball</i>	3240
Polya’s method variant: Developing students’ analytical thinking	
. . . <i>Lavinia Suvi Lanting</i>	3248
How expert mathematics teachers play ‘status games’	
. . . <i>Nicholas James McIvor, Jeremy Hodgen, Sai Loo and Rachel Marks</i>	3256
Implementing the SIMPLE approach: A study on teacher fidelity and perceptions in Kosovo classrooms	
. . . <i>Qendresa Morina and Nada Vondrová</i>	3264
Explicating the work of monitoring students’ mathematical thinking	
. . . <i>Reidar Mosvold, Janne Fauskanger, Raymond Bjuland and Peter Liljedahl</i>	3272
Tensions in teachers’ attempts to balance mathematical challenge and students’ diverse learning needs	
. . . <i>Samaher Ahmed Nama, Despina Potari, Giorgos Psycharis and Chrissavgi Triantafillou</i>	3280
Selecting and sequencing problems for classroom discussion in a problem-posing task: Insights from prospective elementary teachers	
. . . <i>Mehmet Fatih Öçal, Tuğrul Kar, Merve Özkaya and Ferhat Öztürk</i>	3288
Mathematics teacher practice in inquiry-based lessons: a case study in a Japanese upper secondary school	
. . . <i>Toshihiko Ogawa and Takeshi Miyakawa</i>	3296
What do teachers notice when reflecting on vignettes of discussion leading practices? A topic-specific case study	
. . . <i>Monika Post and Dilan Şahin-Gür</i>	3304
Interactions between talk moves and other teaching moves in classroom discussions in ambitious mathematics teaching	
. . . <i>Kjersti Waage and Reidar Mosvold</i>	3312
Learning support practices in the fostering of basic arithmetic skills	
. . . <i>Inga Wienhues and Uta Häsel-Weide</i>	3320
A Preservice Mathematics Teacher’s Reflection on In-The-Moment Noticing of Students’ Mathematical Thinking	
. . . <i>Ayten Öykü Yaşar, Mine Işıksal Bostan and Erdinç Çakıroğlu</i>	3328
The implementation of a new curriculum in Greece: The case of learning and teaching statistics	
. . . <i>Georgia Athanasiou, Konstantinos Stouraitis and Despina Potari</i>	3336
Support shifts in how teachers view their students’ capabilities when co-teachers develop ambitious instructional practice	
. . . <i>Anna Bengtsson</i>	3338
Teaching mathematically gifted students in secondary schools: A systematic literature review	
. . . <i>Peter Kaiser and Moritz Zehnder</i>	3340
Help-seeking interactions in primary school mathematics classrooms	
. . . <i>Emine Shaka, Natalie Fischer and Elisabeth Rathgeb-Schnierer</i>	3342
TWG 20: Mathematics Teacher Knowledge, Beliefs and Identity	3344
Introduction to TWG20: Teachers’ Knowledge, Beliefs and Identity	
. . . <i>Miguel Montes, Veronika Hubenaková, Federica Ferretti, Thorsten Scheiner, Felix Woltron</i>	3345
Beliefs of elementary school teachers regarding the inclusion of special education students in mathematics lessons	
. . . <i>Bital Amir and Esther Sharon Levenson</i>	3353
How teacher education program experiences affect pre-service mathematics teachers’ designated teacher identities?	
. . . <i>Okan Arslan</i>	3361

Teacher knowledge and the incorporation of inclusivity in a primary level generalisation problem	
. . . <i>Ángeles Chico Gómez, Elisabetta Robotti, Nuria Climent Rodríguez and Inmaculada Gómez Hurtado</i>	3369
Pre-service teachers' professional development and mathematics large-scale assessment	
. . . <i>Maria Chiara Cibien</i>	3377
Prospective mathematics teachers' specialised knowledge in response to a task on the density property of rational numbers	
. . . <i>Rosa Delgado Rebolledo and Diana Zakaryan</i>	3385
Pre-service teachers' knowledge of students' misconceptions and difficulties related to functional thinking: a German and Slovak comparison	
. . . <i>Kerstin Frey, Ute Sproesser, Matej Slabý and Ingrid Semanišínová</i>	3393
Exploring strategy flexibility and adaptivity in multidigit multiplication: a study with Austrian in-service primary teachers'	
. . . <i>Martina Greiler, Tanja Lobnig and Almut Thomas</i>	3401
An investigation of TPACK using a 3D Techno-pedagogical integration matrix in the context of mathematics teaching	
. . . <i>Tuğba Hangül Demirci and Hatice Akkoç</i>	3409
Preservice teachers' self-perceptions about their knowledge for teaching	
. . . <i>Hulya Kilic and Fatma Aslan-Tutak</i>	3417
The Theory of planned behavior as a tool for linking beliefs and knowledge within the MTSK model	
. . . <i>Monika Krišáková and Veronika Hubeňáková</i>	3425
Promoting and unpacking pre-service teachers' thinking about students with exceptional difficulties in learning mathematics in the context of a university course	
. . . <i>Philipp Larmann, Leonie Horsch, Samira Reitmann and Matthias Ludwig</i>	3433
Inconsistencies in the process of posing problems for use in class by pre-service teachers	
. . . <i>Juan Pedro Martín-Díaz, Angeles Chico, Isabel Pascual-Martín and Miguel Montes</i>	3441
Characteristics of teachers' lesson observations: A comparison of in-service and pre-service teachers' gestures	
. . . <i>Tatsuya Mizoguchi, Yusuke Shinno, Akiko Tomosada and Toru Hayata</i>	3449
Three-fold meta-didactical conflict. LSA and teacher education	
. . . <i>Serena Monica and Federica Ferretti</i>	3457
Mathematics teachers' identity in the prison context	
. . . <i>Gabriella Pocalana, Silvia Regola and Agnese Ilaria Telloni</i>	3465
Towards European measures for upper secondary teacher students' mathematical content knowledge	
. . . <i>Ottavio Giulio Rizzo and Carl Winsløw</i>	3473
Perceptions of mathematical creativity: The case of one teacher in a special education class	
. . . <i>Maya Ron-Ezra and Esther S. Levenson</i>	3481
Teachers' beliefs regarding the knowledge they need to teach word problems in middle school	
. . . <i>Iris Schreiber</i>	3489
Specialized mathematical knowledge in the scope of geometric isometric transformation translation and its impact on teacher's levels of Interpretive Knowledge	
. . . <i>Caroline Silva and Miguel Ribeiro</i>	3497
Preservice and inservice teachers' understanding of the concept of function: The case of motion problem.	
. . . <i>Matej Slabý and Ingrid Semanišínová</i>	3505
Impact of an academic intervention on prospective teachers' mathematical world views during their transition to university	
. . . <i>Felix Woltron</i>	3513
Elementary preservice teachers' knowledge in creating alternative word problems: A guide for mathematics educators	
. . . <i>Fatimah Ahmad</i>	3521

Teachers' knowledge and beliefs about assessment in mathematics: initial evidence from a national survey of teachers' formative needs	
. . . <i>Giorgio Bolondi, Maria Chiara Cibien, Federica Ferretti, Alessandro Gambini and Francesca Martignone</i>	
.	3523
Alternatively certified mathematics teachers' perceptions, experiences, and commitment to continue teaching	
. . . <i>Evan Dixon McClintock</i> ,	3525
Developing prospective kindergarten and primary teachers' specialised knowledge through tasks for teacher education in the scope of operations with natural, integers and rational numbers	
. . . <i>Sandra Menezes, Miguel Ribeiro, Arne Jakobsen and Maria Mellone</i>	3527
TWG 21: Assessment in Mathematics Education	3529
Introduction to the papers of TWG21: assessment in mathematics education	
. . . <i>Francesca Morselli, Michal Ayalon, Christina Drüke-Noe, Gözde Kaplan-Can, Johanna Rämö</i>	3530
Graphical tasks with graphical feedback on limits of functions to support abstract reasoning	
. . . <i>Alice Barana, Marina Marchisio Conte, Fabio Roman, Matteo Sacchet, Mirela Vinerean and Yosief Wondmagegne</i>	3534
Development of screening instruments for mathematics education: Theoretical Framework and item development	
. . . <i>Léon Brings, Michael Kleine, Samuel Coronado Alvarez, Julia Pilet, Sanja Rukavina, Konstantinos Tatsis, Georgios Fesakis, Andreas Moutsios-Rentzos, Miglena Asenova and Doris Dumičić Danilović</i>	3542
Exploring instrumental orchestration practices for formative assessment through digital technology	
. . . <i>Min Chen, Rogier Bos, Michiel Doorman and Paul Drijvers</i>	3550
Have you thought about short-cuts? – A recommendation for the design of assessment tasks	
. . . <i>Lukas Donner and Evita Lerchenberger</i>	3558
How are different competences represented in standard solutions? An empirical study on central exit exams in mathematics in Germany at the end of upper secondary education	
. . . <i>Christina Drüke-Noe and Sebastian Bauer</i>	3567
Introduction of a practical element in oral examination of mathematics: Teachers learn first	
. . . <i>Frode Olav Haara</i>	3575
Students' reactions to speech input requests in a digital formative assessment of conceptual understanding	
. . . <i>Corinna Hankeln, Susanne Prediger, Ulf Kroehne and Sonja Hahn</i>	3583
Preservice teachers' formative assessment strategies they intend to implement in a real classroom	
. . . <i>Gözde Kaplan-Can and Çiğdem Haser</i>	3591
Written tests through the lens of mathematical competence: how a teacher perceives feedback from test and data collected	
. . . <i>Alice Lemmo, Grazia Cotroni and Laura Polidoro</i>	3599
Evaluating a multi-indicator assessment scoring approach to support mathematical literacy teaching and learning	
. . . <i>Marta Mikite, Ģirts Burgmanis, Ilze France and Dace Namšone</i>	3607
The contribution of mathematics didactics to interpreting the results of a standardized national assessment	
. . . <i>Julia Pilet and Brigitte Grugeon-Allys</i>	3615
Changing the assessment paradigm – What predicts students' choice of assessment method in an undergraduate mathematics course?	
. . . <i>Johanna Rämö, Liisa Myrny, Jokke Häsä and Yan Zi</i>	3623
Using subscores from the high-stakes assessment to explain first-year performance in Mathematics courses	
. . . <i>Tatiana Sango</i>	3631

The role of digital tools in enhancing classroom assessment practices	
. . . <i>İpek Saralar-Aras and Sümevra Tütüncü</i>	3639
Professional development support helping teachers overcome difficulties of implementing formative assessment	
. . . <i>Catarina Andersson, Torulf Palm and Mikael Winberg</i>	3647
Effects of the COVID-19 pandemic on mathematics achievement: An investigation in university math pre-courses	
. . . <i>Andreas Büchter, Frank Osterbrink and Natascha Scheibke</i>	3649
How can the prison context change teachers' perspective and practices about mathematic assessment?	
. . . <i>Veronica Manzoni, Silvia Regola and Chiara Giberti</i>	3651
TWG 22: Curricular Resources and Task Design in Mathematics Education	3653
An introduction to TWG22: Curricular resources and task design in mathematics education	
. . . <i>Annalisa Cusi, Patrick Ebers, Dubravka Glasnović Gracin, Shai Olsher and Hendrik Van Steenbrugge</i> .	3654
Task designs to support connection-oriented mathematical thinking	
. . . <i>Hyman Bass</i>	3662
Students' perspectives on GPT-4's supported problem solving	
. . . <i>Francesco Contel and Annalisa Cusi</i>	3670
Noticing of teacher students on an explorative task to exemplify the potential of using technology	
. . . <i>Patrick Ebers</i>	3678
Synergies and dissonances between designers' and students' perspectives on key features of digital mathematical discussion	
. . . <i>Sara Gagliani Caputo, Laura Branchetti and Annalisa Cusi</i>	3686
Teacher perspectives on textbooks and their role in Implementing the mathematics laboratory approach in Italy	
. . . <i>Marzia Garzetti</i>	3694
Exploring the use of digital textbooks in classrooms: focusing on automated feedback	
. . . <i>Dubravka Glasnović Gracin, Goran Trupčević and Katarina Širanović</i>	3702
Upper-secondary school mathematics teachers' use of a topic-centered research-based teacher guide	
. . . <i>Marcus Gustafsson</i>	3710
Down-to-earth mathematics: transforming curriculum and teaching on function transformations

Perceived difficulty of a mathematical task: do in-service and pre-service teachers have a common view?

Camilla Spagnolo¹ and Chiara Andrà²

¹University of Ferrara, Italy; camilla.spagnolo@unife.it

²University of Eastern Piedmont, Italy

This qualitative study investigates how pre-service and in-service teachers perceive the difficulty of mathematical tasks and examines the factors that shape their evaluations. Using two tasks from the national large-scale assessments INVALSI, we aimed to identify whether perceived difficulties align with those of students and to explore any discrepancies between the two teacher groups. Our findings reveal significant differences between pre-service and in-service teachers, particularly in their handling of open-ended versus structured tasks. In-service teachers generally demonstrated alignment with students' evaluations for simpler tasks, while pre-service teachers exhibited emotions with respect to complex tasks. In our interpretation, these results highlight both the influence of teacher experience on perceived difficulty and the importance of addressing both cognitive and affective factors in teacher professional development.

Keywords: Mathematics education, perceived difficulty, pre-service teachers, in-service teachers, qualitative analysis.

Introduction

Difficulties in mathematics have been investigated in several researches, being one of the most open and studied topics in mathematics education. Difficulties can be classified into different categories depending on the focus: difficulties related to mathematics as a discipline or difficulties related to students in terms of deficits or their specific relationship with mathematics (Zan et al., 2006).

In our research, we focused on the difficulties of mathematical tasks, specifically on the *perceived difficulty* (PD) of in-service and pre-service teachers after solving a mathematical task. Literature distinguishes between difficulty *before* versus *after* a task has been attempted or solved (Eccles & Wigfield, 2020; Efklides & Touroutoglou, 2010); this is an important distinction in terms of perception of difficulty, yet in what follows we articulate a definition of PD that works in either cases. The difficulty of a mathematical task seems to depend on a set of factors, including the mathematical content (Thevenot & Oakhill, 2005; Radmehr & Drake, 2017), the formulation of the problem (Bolondi et al., 2018), text comprehension (Spagnolo et al., 2021), students' abilities or capabilities (Vicente et al., 2007), and affective factors (Zan et al., 2006). During the task-solving process, in fact, a student may encounter multiple difficulties that can depend on both the student's individual characteristics (such as abilities, knowledge, beliefs, and attitudes) and the specific characteristics of the task (such as the text or the mathematical content involved). These features of the mathematical task can influence both the student's and the teacher's perception of the task and, consequently, its PD. Thus, while closely connected, difficulty and PD are two different aspects (Spagnolo & Saccoletto, 2023). Furthermore, a student's PD does not necessarily coincide with the teacher's PD, as shown by Arzarello and Ferretti (2021). The mismatch between teachers' PD of a mathematical tasks and the actual success rates of those tasks opens up reflections related to research on teachers' beliefs about what students think (Philipp, 2007), as effective teaching and learning are believed to

develop from the alignment between teachers' and students' beliefs (Kumaravadivelu, 1991). Our goal is to highlight how pre-service and in-service teachers perceive a task—whether it is easy or difficult—and what factors lead them to this evaluation, while also identifying potential mismatches. Specifically, we aim to investigate which view, between pre-service and in-service teachers' ones, is closer to the students' one.

Theoretical and context background

Currently, in Mathematics Education, there is no widely accepted definition of PD, despite its recognized importance as a factor influencing students' behavior when approaching and solving tasks (Eccles & Wigfield, 2020; Saccoletto & Spagnolo, 2022; Doz et al., 2023). In contrast, in metacognition research, the issue of subjective difficulty has been explored over the past 30 years under various terms (e.g., Eccles & Wigfield, 2020; Doz et al., 2023). At times, PD has been considered a form of self-efficacy, though this connection does not seem entirely appropriate (Eccles & Wigfield, 2020). However, related or overlapping concepts have been defined, such as the “feeling of difficulty” (FOD), which was elaborated by Efklides at various points between the late 20th century and 2011. FOD is described as a “metacognitive experience that monitors cognitive processing as it takes place” (Efklides & Touroutoglou, 2010, p.172) and is explicitly distinguished from PD due to its “experiential nature”.

Although conceptually distinct, “feeling of difficulty” and PD are sometimes treated interchangeably (Nuutila et al., 2021). Acknowledging their differences, in this paper, we have drawn on some characteristics of both concepts and adapted them to the context of mathematics education research. From this perspective, the synthesis proposed by Doz et al. (2023) was especially helpful and aligned with our viewpoint. It suggests that the nature of the “feeling of task difficulty” is metacognitive, stemming from the monitoring of ongoing task processing, and awareness of this process influences self-regulation, effort, emotions, and strategy use.

The factors influencing PD of math tasks have mainly been studied in relation to students' perspectives (Saccoletto & Spagnolo, 2022). For our analysis, we began with the factors characterizing students' PD, as qualitatively identified by Saccoletto & Spagnolo (2022), and compared these to those reported by teachers in our data. According to this study, PD in mathematics can be classified into five categories: *Resolution Strategy*, *Capabilities and Experience*, *Emotions*, *Task Formulation*, and *Self Consideration*. Note that these categories are not mutually exclusive.

The category *Resolution Strategy* includes responses that explicitly mention the approach or method needed to solve the task, according to students, or highlight key elements like calculation or reasoning required to reach a solution. The category *Capabilities and Experience* encompasses answers that reflect students' views of their capabilities and abilities, as well as their prior experiences with similar tasks, which contribute to their familiarity with the problem. Answers that suggest a problem is easy because it resembles something previously encountered also fall into this category. Additionally, it includes responses related to students' self-perception, doubts about their solutions, and difficulties they faced, including the time spent on the problem. The category *Emotions* pertains to responses involving emotions. The category *Task Formulation* comprises responses that refer to the task's formulation, particularly its textual aspects. Finally, the category *Self Consideration* relates to students' personal reflections on their success in mathematics.

Research aim

Under these premises, our goal is to highlight how pre-service and in-service teachers perceive the difficulty of a mathematical task and to examine the factors that contribute to their evaluations. Furthermore, we aim to identify any discrepancies or differences between the perceptions of these two groups of teachers. A key focus of our investigation is to determine which of the two perspectives is more aligned with students' views of task difficulty, providing insight into how teacher experience influences their understanding of student challenges.

This study seeks to elucidate the multifaceted interplay between teacher experience and the PD of mathematical tasks. By employing a qualitative approach, the research not only investigates the cognitive dimensions of task evaluation but also delves into the affective responses that underpin teachers' judgments.

The research questions guiding this study are:

RQ1: How do pre-service and in-service teachers perceive the difficulty of a mathematical task, and what factors contribute to their evaluations?

RQ2: Are there notable discrepancies between the two groups of teachers?

RQ3: To what extent do their perceptions align with those of students?

Methods

We carried out a qualitative deductive study, involving 52 pre-service teachers and 49 in-service teachers of secondary school. All the teachers were from different Italian regions. Teachers filled in an online questionnaire through Google Forms, containing two tasks, some specific questions related to each task and three general questions. Each teacher worked on the questionnaire on their own, without knowing the other participants' answers. The questionnaire was the same used for students in Saccoletto & Spagnolo (2023), as we considered the categories determined by them for students, as an initial reference for teachers' results. We asked the teachers to solve the tasks (Figure 1) and, for each one, answer specific questions related to PD. Additionally, there were specific questions aimed to investigate attitudes and beliefs towards mathematics.

<p>Task 1</p> <p>n is a natural number.</p> <p>Anthony affirms that "$4n-1$ is always a multiple of 3". Is Anthony right? In the table below, mark <u>the only</u> argument that justifies the correct answer.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <td style="text-align: center; padding: 5px;">Anthony is right...</td> <td style="text-align: center; padding: 5px;">Anthony is not right...</td> </tr> <tr> <td style="padding: 5px;">A. <input type="checkbox"/> because $4n-1=3n$</td> <td style="padding: 5px;">C. <input type="checkbox"/> because $4n-1$ is always odd</td> </tr> <tr> <td style="padding: 5px;">B. <input type="checkbox"/> because if $n=4$ then $4n-1=15$</td> <td style="padding: 5px;">D. <input type="checkbox"/> because if $n=3$ then $4n-1=11$</td> </tr> </table>	Anthony is right...	Anthony is not right...	A. <input type="checkbox"/> because $4n-1=3n$	C. <input type="checkbox"/> because $4n-1$ is always odd	B. <input type="checkbox"/> because if $n=4$ then $4n-1=15$	D. <input type="checkbox"/> because if $n=3$ then $4n-1=11$	<p>Task 2</p> <p>Mark states that, for every natural number n greater than 0, n^2+n+1 is a prime number. Is Mark right?</p> <p>Choose one of the two answers and complete the sentence.</p> <p><input type="checkbox"/> Mark is right, because</p> <p>.....</p> <p><input type="checkbox"/> Mark is not right, because</p> <p>.....</p>
Anthony is right...	Anthony is not right...

B. <input type="checkbox"/> because if $n=4$ then $4n-1=15$	D. <input type="checkbox"/> because if $n=3$ then $4n-1=11$						

Figure 1: Task 1 administered to Grade 08 Italian students by INVALSI in 2017 and task 2 administered to Grade 10 Italian students by INVALSI in 2014, www.gestinv.it

We choose two mathematics tasks from the INVALSI tests, as they are statistically validated and were also used in Spagnolo & Saccoletto (2023). In the Italian educational context, INVALSI tests—administered since 2008 in grades 2, 5, 8, 10, and 13 by the National Institute for the Evaluation of the Educational System—allow us to track some of the difficulties students experience over time.

These tests, designed to measure student competence in relation to the Italian curricular guidelines, offer a quantitatively validated tool that complements our qualitative analysis. Our focus was on argumentative questions within the Numbers area. The two tasks (Figure 1) share mathematical similarities, while also exhibiting some differences. Task 1 was a multiple-choice question requiring the identification of a correct argument, whereas Task 2 was an open-ended question that asked for the creation of an argument. Both tasks, however, were based on literal calculation and could be solved using the same strategy—proving the falsity of a statement by providing a counterexample. We remark that the two tasks have been given to students in grades 8 and 10 and they turn out to be difficult in the INVALSI tests, namely a few number of students gave the correct answer. In the study of Spagnolo and Saccoletto (2023) these tasks were administered to students at different grades: grade 8 students (at the end of the school year) and grade 9 students (at the beginning of the school year). The tasks were selected together with the class teachers.

The questions in the questionnaire for tasks 1 and 2 were identical and aimed at probing teachers' ideas, linking them—strictly in a qualitative way—to teachers' attitudes, beliefs, or specific features of the INVALSI tasks. The study adopted a deductive approach to data analysis, starting from the categories identified in Spagnolo and Saccoletto (2023) and working towards a broader understanding of overarching patterns and trends.

All analyses were carried out with Excel for the calculation of average values and for the graphical representation of the data, while the qualitative analysis of the teachers' evaluation of motivation was developed with the software MAXQDA 24 (v. 4.0), using as codes the macro-categories of factors influencing PD (Spagnolo & Saccoletto, 2023).

Results and discussion

Qualitative analysis of teachers' answers highlight important distinctions between how pre-service and in-service teachers perceive the difficulty of mathematical tasks, particularly when comparing Task 1 and Task 2.

Task 1, a multiple-choice question, was generally perceived as less challenging by both pre-service and in-service teachers, though the reasons behind their evaluations differed. In-service teachers, being more familiar with structured tasks, found Task 1 relatively straightforward. Pre-service teachers, while acknowledging the simplicity of the task, raised concerns regarding the clarity of the task formulation. Both groups perceived task 2, an open-ended question, as more difficult. On one hand, in-service teachers found the need for constructing a mathematical argument challenging, but their experience helped them cope with the complexity. Pre-service teachers, on the other hand, attributed much greater difficulty due to the open-ended nature of the task, reporting a reflection focused on the anxiety of answering an open-ended question. Below (Table 1), we present the distribution of responses in percentage terms for each category.

Student's PD does not seem to be related to the ability to answer the question correctly (Saccoletto & Spagnolo, 2022) and seem to refer much more often to the text, personal preparation, specific content, or aspects related to the production of explanation or argumentation to support their results. Also completely missing are aspects related to emotions, but much more present are self-considerations on how to improve one's performance.

We report the distribution of the categorized responses of students, pre-service and in-service teachers in the table below. In particular, for students we refer to the analysis in Spagnolo & Saccoletto (2023), so we report number and percentages for teachers, and only percentages for students.

Table 1: Distribution of the responses to Tasks 1 and 2 of students, pre-service and in-service teachers according to macro-categories identified in Saccoletto & Spagnolo (2023). The column with students' percentages is derived from Saccoletto & Spagnolo (2023).

Macro-categories	Students Task 1	Pre-service teachers Task 1	In-service teachers Task 1	Students Task 2	Pre-service teachers Task 2	In-service teachers Task 2
<i>Resolution strategies</i>	51,8%	40,38% (21 teachers)	59,18% (29 teachers)	33,6%	36,54% (19 teachers)	57,14% (28 teachers)
<i>Capabilities and experience</i>	39%	21,15% (11 teachers)	26,53% (13 teachers)	41,2%	30,77% (16 teachers)	46,94% (23 teachers)
<i>Emotions</i>	0%	36,54% (19 teachers)	6,12% (3 teachers)	2,9%	42,31% (22 teachers)	4,08% (2 teachers)
<i>Task formulation</i>	15,3%	28,85% (15 teachers)	18,37% (9 teachers)	5,3%	19,23% (10 teachers)	14,29% (7 teachers)
<i>Self-considerations</i>	47,8%	11,54% (6 teachers)	2,04% (1 teacher)	44,8%	5,77% (3 teachers)	4,08% (2 teachers)

Both for Tasks 1 and 2, pre-service teachers focused mostly (respectively 40,38% and 36,54% of teachers in each task) on *Resolution strategies*, identifying the correct strategy to solve the task, using logical elimination methods common in multiple-choice formats for Task 1, whereas for Task 2 emphasized the challenge of developing a strategy to construct an argument. For example, one teacher states that “if you often solve multiple choice questions, it becomes easier for you. That way you know it’s important to start with the options and go by exclusion using logic”. This answer was also categorised under *Capabilities and experience*. In-service teachers give also importance to experience and prior familiarity with similar tasks. 6% and 4% in-service teachers referred to the *Emotions* commenting Tasks 1 and 2 respectively, and 2% and 4% on *Self-Considerations* categories, commenting that “if I would have given more open-ended questions to my students during classes, they would have been less in trouble”. In short, a few in-service teachers elicited emotions and self-considerations. Some teachers hypothesised problems in comprehension of the task (for both Task 1

and Task 2) connected with *Task formulation*. For example, one teacher stated, “For both tasks, I noticed that the wording could potentially cause some confusion, especially for students who struggle with calculations with letters. However, the instructions are clear enough for those with some experience in solving similar problems”.

Pre-service teachers also focused on problem-solving strategies, in particular the answers of 21 pre-service teachers (for Task 1) and 19 pre-service teachers (for Task 2) were categorised below *Resolution strategies*. In both tasks, also *Capabilities and experience* and *Task Formulation* were dominant factors influencing PD of pre-service teachers. However, pre-service teachers frequently elicit emotional factors. Most of the answers under macro-category *Emotions* are related to negative emotions; for example, “Arguing something that has never been seen before in class [referring to ‘ $4n-1$ is always a multiple of 3’] could generate a lot of anxiety in students”, or “If you don’t think of using a counterexample, proving a sentence in general can start panic”. The emotional impact was most pronounced in Task 2 for pre-service teachers, highlighting the importance of preparing their future students to handle the cognitive and emotional demands of open-ended tasks.

In terms of alignment with student perspectives (for results of students see Spagnolo & Saccoletto, 2023), Task 1 was more easily aligned with students’ evaluations, particularly by in-service teachers. This suggests that experienced teachers have a clearer understanding of how students approach and evaluate simpler, structured tasks. Task 2, with its open-ended format, revealed a greater mismatch, especially among pre-service teachers, who overestimated the difficulty, likely due to their limited experience in such tasks with students.

In direct response to our research questions, the results indicate that for RQ1, both pre-service and in-service teachers exhibit distinct perceptions of mathematical task difficulty, with pre-service teachers generally overestimating difficulty due to a greater emotional response and limited experience, whereas in-service teachers demonstrate a more balanced approach rooted in cognitive strategies and familiarity with task structures; in addressing RQ2, clear discrepancies are evident between the two groups, with pre-service teachers’ evaluations being more influenced by affective factors and in-service teachers’ judgments aligning more closely with analytical reasoning; and concerning RQ3, the alignment between teachers’ and students’ perceptions is notably stronger among in-service teachers, suggesting that practical experience enhances the ability to accurately estimate student difficulties.

Concluding remarks

The aim of the research is to compare how in-service and pre-service teachers perceive the difficulty of a task, and to see how much they differ from students’ PD. PD has a strong affective connotation, as it entails beliefs, self-efficacy and emotions. The categories of resolution strategy, capabilities and experiences (which in our view are linked to beliefs), emotions, task formulation and self-consideration emerge in a previous study (Saccoletto & Spagnolo, 2023) and it has been observed that they might overlap, namely that a same teacher might consider more than one category when formulating their account for why they perceive a task as difficult or easy. Even if overlapping also in our study, these categories emerge with different intensity among groups of in-service and pre-service teachers. We have noticed, in fact, that resolution strategies, capabilities and experiences, and task formulation categories emerge in in-service teachers’ accounts. This is also in line with literature

on *difficulty* of mathematical tasks, as Vicente *et al.* (2007) stress the central role of students' abilities and capabilities, Bolondi *et al.* (2018) and Spagnolo *et al.* (2021) maintain that difficulty depend on the formulation of the problem and text comprehension, respectively, and Thevenot and Oakhill (2005) and Radmehr and Drake (2017) link difficulty to the mathematical content, which can be related to the category of resolution strategies.

We have also highlighted that Zan *et al.* (2006) argue that affective factors play a central role in the difficulty of a task, and pre-service teachers in our study focus on emotions quite significantly.

The students' perceptions are more in line with in-service teachers' ones, as if, on one side, as Kumaravadivelu (1991) posits it, there is a (positive, in our view) alignment between students' and teachers' beliefs, but on the other side it seems that emotions are elicited by those who are somehow further from everyday life in mathematical classrooms, namely pre-service teachers.

The relatively small sample size and qualitative nature of the study limit the generalizability of the findings. However, the consistent trends identified across both tasks provide a useful foundation for further exploration into how task type and teacher experience influence PD of mathematical tasks. Moreover, despite the differentiation of factors influencing PD, our definition appears to be adequate in capturing the perception of difficulty across different cases. The categories we identified, while with different distributions, help us categorize the responses of both groups of teachers (pre-service and in-service). They highlight the multifaceted nature of the construct, reinforcing the idea that PD encompasses both cognitive and affective dimensions, as well as task-related and individual-related aspects.

In conclusion, our results indicate clear differences in how pre-service and in-service teachers perceive the difficulty of tasks. Experience plays a key role in shaping these perceptions, and understanding these dynamics is crucial for improving teacher professional development and ensuring that teachers are better equipped to assess and address students PD face in solving mathematical tasks.
